non	Drug and psychotropic substance abuse and addiction	non	Biodegradation of carbenzyme and oxymatine by	.1
			fungi Using aquatic insects as vital evidence of water pollution	.2
			A chemical study of a group of plant families	.3
			Chemotherapy with gemcitabine for pancreatic cancer	.4
			Relationship of some types of immune markers: HLA_G type receptors and T-reg immune cells with the progression of type 2 diabetes.	.5
			Taxonomic and ecological study of parasitic flowering plants in Iraq	.6
			Gene expression of human beta defensin-3 gene and its relationship to microbial	.7

			infections in the oral cavity of children with oral cancer in Basrah Children's Specialist Hospital.	
			Isolation and identification of some types of opportunistic amoebas from different clinical and environmental sources in Basra Governorate and study of their pathological effects on laboratory infections.	.8
			Isolation and study of the properties of bacteriophages against many antibiotic-resistant <i>Pseudomonas aeruginosa</i> isolated from burn patients in Basra Governorate - Iraq	.9
			Studying the toxic effect of heavy metal (lead acetate) on some parts of the body and evaluating the protective effect of ginseng alcoholic extract and vitamin E	.10

# Scientific Activities

# 2017

			The effect of induced diabetes on the pathogenesis of skeletal muscles, nerves and some visceral organs in laboratory rats and the role of arginine as a protective factor (a histological and biochemical study)	.11
			Incidence of candidiasis in anemic patients	.12
			the efficiency of two types of submersible aquatic plants in removing nickel and lead and treating wastewater	.13
