Approval of the Dean of the College

Academic Program Description

This academic program description provides a brief summary of the most important characteristics of the program and the learning outcomes expected of the student to achieve, proving whether he has made the most of the available opportunities. It is accompanied by a description of each course within the program

tute University of Basrah – College of Science	1. Educational institution
Department of Ecology	2. Scientific Department / Center
ecology	3. Name of academic or vocational program
Bachelor of Environmental Science	4. Final Certificate Name
Decisions	5. Academic System : Annual / Decisions / Other
We seek ABET accreditation	6. Accredited Accreditation Program
Support opportunities	7. Other external
Training Courses	influences
Field visits	
Summer Training	
1/9/2020	8. History of the preparation of the description

- 9. Objectives of the Academic Program
 - Qualifying specialized graduates who are familiar with the theoretical foundations of environmental sciences and their field applications.

- Preparing a qualified cadre to engage in postgraduate studies in the future and the university education and scientific research to advance the educational process in the fields of environmental sciences.
- Supporting scientific and technical research in Iraq.
- Spreading awareness and knowledge in the fields of ecology.
- Responding to the requirements of the labor market and community service.

10. Required Program Outcomes and Teaching, Learning and Assessment Methods

A- Cognitive Objectives

- A1- Enable students to obtain knowledge and understanding of the concept of ecology.
- A2- Enabling students to obtain the concepts of the importance of the environment and its components for different neighborhoods.
- A3- Identify the environmental and health impacts of natural and industrial pollutants.
- A4- Identify fixed and mobile sources of environmental pollutants.
- A5- Identify methods of treating and controlling industrial pollution.
- A6- Identify the most important global environmental phenomena.

B- Program Skills Objectives

- B1- Acquiring scientific skills in the examination and measurement of environmental pollutants.
 - B2- Acquire scientific skills in the treatment of environmental pollutants.
 - B3- Acquire the skills of remembering, analyzing and developing.
 - B4- Acquire the skills of collecting and analyzing environmental data

Teaching and learning methods

- 1- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
- 3- Practicality
- 4- Scientific trips and field work.
- 5- Encouraging students to visit scientific websites.

Evaluation methods

- Daily, quarterly and final theoretical and practical tests.
- Discuss graduation projects.
- C- Emotional and value goals.
- C1- The ability to communicate information after monitoring and collecting data.
- C2- Linking information to the health reality of humans and influencing other neighborhoods.
 - C3- Laying the correct foundations for scientific research.
 - C4- Develop research project plans to solve environmental problems

Teaching and learning methods

- 1- Providing students with curriculum vocabulary and scientific resources.
- 2- Direct and electronic explanation and delivery.
- 3- The use of devices in measuring environmental pollutants.
- 4- Forming discussion groups during the lecture that require reflection and .analysis

Evaluation methods

2- Monthly tests. 3- Final exams. d. General and qualifying-transfer skills (other skills related to employability and personal development). .D1- Developing the mental abilities of the student D2- Developing skill capabilities in the field of environment. D3- Dealing with field and laboratory environmental measuring devices. D4- Using computers to deal with environmental data. D5- Enabling the student to pass job interviews and professional tests. Teaching and learning methods 1- The method of explaining the lecture and discussion. 2- Urging the student to conduct research and reports. 3- Dividing students into groups in practical lessons. Evaluation methods 1 - Practical training in the curricula 2- Follow-up reports 3- Final exams 11. Program Architecture	1. Daily testing and reports.								
d. General and qualifying-transfer skills (other skills related to employability and personal development). .D1- Developing the mental abilities of the student D2- Developing skill capabilities in the field of environment. D3- Dealing with field and laboratory environmental measuring devices. D4- Using computers to deal with environmental data. D5- Enabling the student to pass job interviews and professional tests. Teaching and learning methods 1- The method of explaining the lecture and discussion. 2- Urging the student to conduct research and reports. 3- Dividing students into groups in practical lessons. Evaluation methods 1 - Practical training in the curricula 2 - Follow-up reports 3 - Final exams	2- Monthly tests.								
and personal development). .D1- Developing the mental abilities of the student D2- Developing skill capabilities in the field of environment. 12. Planning for personal development

- 1- Know the components of the environment and its problems, biodiversity and the role of man in improving the environmental reality.
- 2- Encourage participation in workshops, seminars and scientific conferences.
- 13. Admission criterion (setting regulations related to admission to a college or institute)
 - Scientific central admission according to the instructions of the Ministry of Higher Education and Scientific Research.
 - He holds a certificate of preparatory school, scientific branch.
- 14. The most important sources of information about the program
 - 1- Books and methodological sources.
 - 2- Books and auxiliary resources.
 - 3- Skills of use and self-development.
 - 4- Electronic library.
 - 5- Internet.

First Stage/ General Biology E101

The course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, demonstrating whether he has made maximum use of the available learning opportunities.

1. Educational Institution	College of Science/ University of Basrah
	some of some of similarity of subtuin
2. Department	Ecology
3. Course name/Code	General Biology/ E101
A Dograe program	BSc.
4. Degree program	DSC.
5. Attendance Form Available	Weekly
	J
6. Semester/ Year	First Semester/ 2020-2021
7. Total of study hours	30 hours + 60 practical hours
O The course description was	01 /00 /2020
8. The course description was	01/09/2020
prepared in	
9 Aims of the Course	

9. Aims of the Course

Increase The student's ability to recognize the plants, their habitats, their appearance, how they relate to each other, where they grow, their importance, and how plants evolved. As well as to familiarize the student with the study of animals, their anatomy, habits, and behavior.

10. Course outcomes and methods of teaching, learning and assessment

a- Knowledge and Understanding goals

- a.1-To understand the scope of Botany.
- a2- To understand the basic form of life.
- a3- To understand the cell structure and identify the differences between animal and plant cells.
- a4- To make the students exposed to the diverse plant life forms.
- a5- To develop the ability of the students to identify the plants according to their evolution degree.
- a6- To increase the student's ability to recognize the animals according to phyla, classes, orders, and species.
- a7- To understand the evolution relationship[between animal phyla according to morphological and anatomical traits.
- a8- To understand the importance of animal diversity.
- a9- To understand the dynamic equilibrium within a community of organisms.
 - b- Subjective- Specific Skilles
 - b1- Recognize the position of the plant in the broad classification and phylogenetic level.
 - b2- Identifying the tissue construction of the animals from the simplest to the most complex.

Learning Methods

- 1. Explanation and Discussion of the Lectures
- 2. It is boosting the student to conduct research and reports.
- 3. Urging the student to make PowerPoint presentations.

Evaluating Methods

Theoretical and practical semester exams, in addition to the final exam

- C- Emotional and evolutional goals
- 1. The ability to deliver information after monitoring and collecting data.
- 2. Linking knowledge to environmental reality

Learning Methods

- 1. Explanation and Discussion of the Lectures
- 2. Boosting the student to conduct research and reports.
- 3. Urging the student to make PowerPoint presentations

Evaluating Methods

- 1- Daily test and reports
- 2- Monthly exams
- 2- Final exams
 - d- General qualification skills transferred (other skills related to employability and personality development)
- 1. Developing the mental abilities of the student
- 2. Developing the skills
- 3. Dealing with field and laboratory

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, demonstrating whether he has made the most of the available learning opportunities. It must be linked to the description of the program.

Sequencing of course content

Week	Hours	Course Outcomes	Unit name	Learning method	Evaluation method
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab.	Knowledge and understanding of lectures	General introduction about the plants The differences between living and non-living things Life dominoes and biological organization Cell and cell types Kingdome of Bacteria	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	First exam. Algae Fungi Lichens	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Ferns Mosses Gymnosperms Angiosperms	Understand the evolving state of knowledge	Daily and monthly tests

				learn to carry out practical work, in the field and in the laboratory	
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Introduction to animals kingdom Living organisms (binomial &classification)	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab.	Knowledge and understanding of lectures	Homeostasis and environment Basic tissues in different organisms(body structure(Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Second exam. Organisms biodiversity	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Organisms biodiversity (Continuation of the lecture) Skin structure and the modifications in variable organisms Digestive system in(fish, birds, mammals, ruminant	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests

- 12. Course Development Plan
 course development based on recent versions of books and references.

First Stage/ Fundamental Ecology/ E102

The course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, demonstrating whether he has made maximum use of the available learning opportunities.

1-Educational Institution	College of Science/ University of
	Basrah
2- Department	Ecology
3- Course name/Code	Fundamental Ecology/ E102
4- Degree program	BSc.
5-Attendance Form Available	Weekly
6-Semester/Year	First Semester/ 2020-2021
7-Total of study hours	30 hours
8-The course description was prepared in	01/09/2020
0.0	1

9-Course Aims

This course works on fundamental ecology and focuses on the interaction between organisms and the environment. Students investigate the relationship between abiotic and biotic components of an ecosystem. Students examine the interplay between these components at the organismal, population, community, and ecosystem levels.

10- Course outcomes and methods of teaching, learning, and assessment

A. Cognitive goals

- A1- Get to know the ecosystem.
- A2- Learn about environmental terms.
- A3- Identify the components of the ecosystem.
- A4- Learn about the interactions that occur in the environment
- A5- To identify the environmental relationships between living and non-living components

B. Skills objectives of the course.

- B1- Acquire basic knowledge of the ecosystem and the terms used.
- B2 Qualifying the student to learn about environmental sciences in the coming semesters.
- B3- Developing English language learning skills

Learning Methods

- 1-Theoretical and practical lectures.
- 2-Use of educational aids (presentations and scientific films).
- 3- Practical application.

Evaluation methods

Theoretical and practical semester exams, in addition to the final exam

- C- Emotional and value goals
- 1 -The ability to monitor and collect environmental data
- 2 To make the student look at the environment from a scientific point of view.

Teaching and learning methods

Explanation, direct speech, and presentation using illustrations

Evaluation methods

- 1- Daily quizzes and reports.
- 2- Monthly exams.
- 3- Final exams.
- D- General qualification skills transferred (other skills related to employability and personality development)
- 1- Developing the skills.
- 2-Dealing with field and laboratory environmental measuring devices.
- 3-Developing the mental abilities of the student.

This course description summarizes the essential characteristics of the course and the learning outcomes expected of the student to achieve, demonstrating whether he has

made the most of the available learning opportunities. It must be linked to the description of the program.

Sequencing of course content

Week	Hours	Course Outcomes	Unit name	Learning method	Evaluation method
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab.	Knowledge and understanding of lectures	What is ecology? Divisions of ecology Ecosystem Ecosystem components Abiotic Components Biotic Components Producers Consumers	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	First exam.	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Herbivores, Carnivores Omnivores, Decomposers Incomplete ecosystem Levels of studying ecology Population Community Biome Environment (biophysical)	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Food chain trophic level Types of Food Chains found in Ecosystems Grazing food chain Detritus food chain Significance of food chain	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed and 4th weeks	3 h. lect. 2h. lab.	Knowledge and understanding of lectures	Food web feeding relations Energy flow in the food chain	Understand the evolving state of knowledge learn to carry out practical work, in the field and in the laboratory	Daily and monthly tests
1st week, 2ed, 3ed	3 h. lect. 2h. lab	Knowledge and understanding of lectures	Second exam.	Understand the evolving state of knowledge	Daily and monthly tests

14. Course Development Plan

course development based on recent versions of books and references.

The first stage / photography and nature J111

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities . It must be linked to the program description.

University of Basrah – College of Science	1- Educational institution
ecology	2- Scientific Department / Center
Photography and nature (J 111)	3- Course Name/Code
Bachelor	4- Programs in which he enters
weekly	5- Available Attendance Forms
First Semester 2020-2021	6- Semester / Year
15 credit hours	7- Number of Credit Hours (Total)
1/9/2020	8- The history of preparation of this description

9- Course Objectives

The student's ability to identify the basics of photography, types of digital cameras and their parts, how to adjust them, how they work, and how to capture, process and store digital images with appropriate extensions

10. Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Know the difference between photography with photographic cameras (with film) and digital cameras
- A2- The reason for resorting to the use of digital cameras
- A3- Parts of digital cameras and the most important terms related to digital photography
- A4- How to adjust the camera and its mechanism of work.
- A5- Different automatic, semi-automatic and manual shooting modes.
- A6- Know the advantages and disadvantages of types of digital cameras and the types of lenses suitable for photography
- A7- Know how to adjust the settings in different weather conditions and how to adjust the camera to photograph wildlife
- A8- Know the most important image extensions and how the image is processed and stored
- B Skills objectives of the course.
 - B1- How to hold the camera and learn to adjust the settings.
 - B2- Take good pictures.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - Ability to photograph.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities
 - 3- Dealing with the digital camera.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities . It must be linked to the program description.

21 Causas Objectives			

21- Course Objectives

The student's ability to identify plant groups and how to diagnose them and identify their different parts, types, genera and families.

13. Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1 Knowledge of the descriptive terms of the phenotypic parts of the plant
- A2- Know other taxonomic evidence
- A3- Knowledge of pollination methods, breeding systems and classification
- A4- Knowing the name
- A5- Know the description of the families and the most important genera and species
- B Skills objectives of the course.
 - B1- Identify the main sections of plant groups with examples of some families, genera and species.
 - B2- Identify a practical picture of the role of plants in the environment.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports and collect plant samples.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and influencing other neighborhoods.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the mental abilities of the student
 - 2- Developing skill capabilities
 - 3- Dealing with field and laboratory environmental measuring devices.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

1/9/2020	8- The history of
	preparation of this
	description

9- Course Objectives

The student's ability to identify the principles of taxonomy, diagnose and name objects and place them in their appropriate taxonomic ranks.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

- A- Cognitive objectives
 - 1- Identify the principles of taxonomy.
 - 2- The importance of taxonomy in the diagnosis and naming of animal organisms.
 - 3- Knowing the rules of writing the scientific name.
 - 4- Arranging living organisms within taxonomic ranks, which facilitates dealing with them.
 - 5- Identify the characteristics of living organisms and their taxonomic groups.
- B Skills objectives of the course.
 - The ability to diagnose and classify living organisms.
 - 2- Provides various types of taxonomic knowledge to scholars and practitioners in this field.

Teaching and learning methods

- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
 - 3- Practicality

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- C1- The ability to communicate information after investigation and data collection.

C2- Linking information about the existence of animal organisms and their relationship with humans and other living organisms.

Teaching and learning methods

- 1- Explanation and direct delivery.
- 2- Using field skills and supplies in developing the student's ability to deal with living organisms in their environments.
- 3- Powerpoint presentation. and screen.

Evaluation methods

- 1. Daily testing and reports
- 2. Monthly Tests
 - 3- Final Exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1 Development of the mental abilities of the student
 - 2- Skill Development
 - 3- Dealing with field and laboratory environmental measurement and diagnostic devices.

Course Structure

9- Course Objectives

The student's ability to identify the different environments of the plant, the influence of factors on its growth, development and distribution, and how to measure its quantitative and descriptive qualities.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowledge of vegetation cover, types, development and distribution in the world and in Iraq
- A2- Knowing the impact of environmental and climatic factors on it,
- A3- Knowledge of ecosystems and their types and their relationship to water and soil
- A4- Knowledge of plants and their natural communities and their distribution in Iraq
- A5- Know the role of plants in sustainable development
- B Skills objectives of the course.
 - B1- Provide students with theoretical, applied and field information to help them develop their understanding, skills and scientific abilities in plant ecology and its applications
 - B2- And know the relationship of plants with the different components of the environment

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports and collect plant samples and save them.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and influencing other organisms.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests

1-10-2020	8.	The history of
		preparation of this
		description

9. Course Objectives

The student's ability to identify plant and animal plankton, their types, classification, environmental and economic importance, as well as their distribution in the environment. As well as methods of measuring primary productivity in the environment and the factors affecting it.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1-A1- Identification of groups and types of major phytoplankton.
- A2- Identify the groups and types of the main zooplankton.
- A3- Identify the environmental and economic importance of plankton
- A4- Knowing the environmental conditions affecting their growth and prosperity and their relationship with each other
- A5- Measurement of primary productivity of phytoplankton in the environment
- A6- Knowing the environmental circumstance affecting primary productivity

B - Skills objectives of the course.

- ${\rm B1}$ ${\rm B1}$ Acquire the skill of diagnosing and classifying phytoplankton and animals present in the environment.
- B2 Acquire the skill of measuring primary productivity and analyzing its results
- B3 Inferring the quality of ecosystem health through knowledge of the diversity of plankton present in it

Teaching and learning methods

- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
 - 3- Practical application, which includes the examination of chips and readymade models installed and live plankton and the conduct of primary productivity measurement laboratory and field.

Evaluation methods

- 1. Daily tests and laboratory reports
- 2. Monthly Tests
- 3- Final exams
- C. Emotional and value goals
- C1- The ability to recognize the health of the ecosystem through the biodiversity of plankton.
 - C2 Linking the environmental imbalance with the number and types of plankton present
 - C3- Assess the state of the ecosystem and its impact on the rest of the elements of the system and the environment.

Teaching and learning methods

- 1- Explanation and direct delivery of lectures.
- 2- Using light and anatomical microscopy and live and fixed models of plankton and conducting a productivity measurement experiment
- 3- Powerpoint presentation and screen.

Evaluation methods

1- Follow-up laboratory reports and drawings for models and slides 2-Final Exams

- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - -D1- Developing the mental abilities of the student
 - D2- Skill capacity development
 - D3- Dealing with ordinary and anatomical light microscopes.
 - D4- Monitoring and evaluating the environment.

9- Course Objectives

The student's ability to understand biodiversity, its divisions, the factors affecting it, and the evidence used in measuring it

10- Course Outcomes and Methods of Teaching, Learning and Assessment

- A- Cognitive objectives
 - 1- Identify the components of the ecosystem and the importance of biodiversity and its sections.
 - 2- The importance of biodiversity for the stability of ecosystems.
 - 3- Identify the factors affecting biodiversity and species extinction.
 - 4- Identify the most common indicators in calculating biodiversity.
 - 5- Identify the primary and secondary succession and its types.
- B Skills objectives of the course.
 - 1- Use common biodiversity guides.
 - 2- Studying the biodiversity of different types of living organisms (plants and animals).

Teaching and learning methods

- 1- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
- 3- Practicality

9-Course Objectives

The student's ability to identify microbiology groups in the environment and their environmental role and how to benefit from them in our daily lives.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowledge of the basic groups of microorganisms in the environment
- A2- Identify how microorganisms affect different parts of the environment and how they are affected by them.
- A3- Identify the role of the microorganism in different environments.
- A4- Knowing the impact of various environmental factors on the presence of microorganisms in the environment.
- A5- Know the environmental role played by microorganisms in different environments.
- A6- Knowing the harms and benefit of the presence of the organism in different environments and how to harness them for the benefit of humans.

B - Skills objectives of the course.

- B1- Practical identification of the main groups of microorganisms.
- B2- Identifying in a practical way the role of the microorganism in the environment.

9-Course Objectives

The student's ability to identify the most important sources of chemicals, their interactions, transformations and effects on the environment, humans and other organisms.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

- A- Cognitive objectives
- 1- Identify the components of the atmosphere, water and land.
- 2- Chemical reactions that occur in the atmosphere of different substances and their environmental and health effects.
- 3- Chemical reactions and transformations that occur in the aquatic environment of different materials and the role of aquatic organisms and environmental conditions in those transformations.
- 4- Chemical reactions and transformations that occur in the land environment of different materials and their different effects on terrestrial organisms.
- 5- Biogeochemical cycles of carbon, nitrogen, phosphorus, sulfur elements. Identify the components of the atmosphere
- B Skills objectives of the course.
- 1- Acquire the skills of examination and measurement of chemicals in air, water and soil.
- 2- Identify the most important transformations that occur in various chemicals.

9. Course Objectives		_

9- Course Objectives

Introducing the student to the different wetland environments, studying their physical and chemical properties, identifying various biological groups, and showing the role of wetlands in nutrient recycling.

- 10- Course Outcomes and Methods of Teaching, Learning and Assessment
- A- Cognitive objectives

A1- Knowledge of the different scientific and administrative definitions of wetlands

the	page
	Pusc

- A2- Knowing the general characteristics of wetlands and their distinctive features.
- A3- Knowledge of the science of wetlands water, its sources and its importance for wetlands.
- A4- Knowledge of wetland soil, its types and distinctive characteristics
- A5- Study of biochemical recycling of the most important nutrients in wetlands
- A6- Identify the different biological groups in the wet ground.
- B Skills objectives of the course.
 - B1- Identify the importance of wet ground in the surrounding environment in an accurate scientific manner.
 - B2- Identify the different biological groups and the role of each group in the food pyramid.

Teaching and learning methods

- 1- How to explain the lecture and interactive discussion
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- 1-The ability to communicate information in an easy and understandable way.
- 2- Linking information to environmental reality to show the importance of wetlands.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the mental abilities of the student
 - 2- Developing skill capabilities
 - 3- Dealing with field and laboratory environmental measuring devices.

9. Course Objectives	

9- Course Objectives

The student's ability to identify the nature of air pollution, its sources, effects and methods of control.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- 1. Identify the components of the atmosphere
- 2- The importance of the atmosphere for different organisms.
- 3- Identify the health effects of external and indoor air pollutants.
- 4- Identify fixed and mobile sources of air pollutants
- 5- Identify methods of treating and controlling air pollutants.

tne	page
-----	------

- B Skills objectives of the course.
 - 1- Acquire the skills of examination and measurement of air pollutants.
 - 2- Reduce air pollution.

Teaching and learning methods

- 1- Theoretical and practical lectures.
 - 2 Use of teaching aids (presentations and scientific films)
 - 3- Practicality

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- The ability to communicate information after monitoring and collecting data.
- Linking information to the health reality of humans and influencing other neighborhoods.

Teaching and learning methods

- Direct explanation and delivery.
- The use of devices in measuring air pollutant concentrations.
- Powerpoint presentation. and screen.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - -Developing the mental abilities of the student
 - -Skill capacity development
 - Dealing with field and laboratory environmental measuring devices.

	preparation of this
	description

9- Course Objectives

The student's ability to identify the different types ofwater and soil pollutants and ways to control and reduce them.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Identify the components of the water environment and soil.
- A2- The importance of the aquatic environment for life on Earth.
- A3- Identify the most important forms of environmental pollution.
- A4- Identify the sources of pollutants in the environment.
- A5- Identify the effects of various environmental pollutants on different forms of life and the imbalance they cause to the ecosystem and its balance.
- 6- Knowing ways to reduce pollution and its treatments...
- **B** Skills objectives of the course.
 - 1- Learn methods of diagnosis and estimation of pollutants in the environment.
 - 2- Reducing environmental pollution.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.
- 4- Practicality

Evaluation methods

Semester and final daily theoretical and practical tests

C. Emotional and value goals

- C1- The ability to communicate information after monitoring and collecting data.
- C2- Linking information to the environmental and health reality of humans and other organisms.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final Exams-

Direct explanation and delivery.

- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities
 - 3- Dealing with field and laboratory environmental measuring devices.

9 Course Objectives	

9-Course Objectives

Developing the student's abilities to plan for the establishment, management and development of nature reserves.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive goals

- A1- Know the basic conditions of the Nature Conservancy Organization (IUCN) about nature reserves.
- A2- Basic divisions and classifications of nature reserves and their definitions.
- A3- Knowing the basic conditions and rules for building the nature reserve and giving it its own category.
- A4- Field procedures for evaluating areas to turn them into nature reserves.
- A5- Knowing the mechanism of implementing a nature reserve project (logistical, administrative, scientific).
- A6- Knowing how to manage, sustain and develop a nature reserve.
- A7- Knowing how to transform the marshes of southern Iraq into nature reserves and divide them into different areas.
- **B- Program Skills Objectives**
- B1- Acquire the necessary skill in how to diagnose areas eligible for the establishment of nature reserves.
 - 2- Acquire the necessary skill in how to properly manage reserves successfully.

Teaching and learning methods

th	e	pa	ge

- 1- The method of explaining the lecture and discussion.
- 2- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical exams

- C- Emotional and evaluation goals.
- C1- Linking the importance of environmental disciplines and their eligibility in the establishment and management of natural reserves.
- C2- Spreading the culture of nature reserves and studying them academically through which cadres working in them can be qualified.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Monthly tests
- Final exams
- d. General and qualifying skills transferred (other skills related to employability and personal development).
 - D1- Developing the mental abilities of the student
 - D2- Developing the student's skills on how to establish and manage natural reserves.
 - D3- Establishing competencies through which to lead and manage projects for natural reserves.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

9- Course Objectives

The student's ability to absorb the freshwater environment and estuaries and study the factors affecting it

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- 1- Identify the components of the ecosystem and the importance of biodiversity and its sections.
- 2- The importance of biodiversity for the stability of ecosystems.
- 3- Identify the factors affecting biodiversity and species extinction.
- 4- Identify the most common indicators in calculating biodiversity.
- 5- Identify the primary and secondary succession and its types.

B - Skills objectives of the course.

- 1- Identify fresh static and mobile environments as well as the estuary environment.
- 2- Studying the biodiversity of various types of living organisms (plants and animals) in static and mobile environments.

Teaching and learning methods

- 1- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
- 3- Practicality
- 4- Field trips

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - The ability to communicate information after collecting and analyzing data.
- Link information to the reality of the ecosystem.

Teaching and learning methods

- Direct explanation and delivery.
- The use of devices in measuring nutrient concentrations, dissolved oxygen and salts.
- Powerpoint presentation. and screen.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - -Developing the mental abilities of the student
 - -Skill capacity development
 - Dealing with field and laboratory environmental measuring devices.

0 Course Objectives	

The student's ability to identify the importance of natural resources and ways to sustain them, as well as to identify the types of renewable and non-renewable energy sources and how to obtain new sources of energy.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowing the most important sources of natural resources.
- A2- Identify the types of renewable and non-renewable energy sources.
- A3- Identify the types of alternative energy sources for fossil fuels.
- A4- Knowing ways to sustain natural resources.
- A5- Knowing the role played by the seas and oceans in providing humanity with its food and energy.
- A6- Knowing the importance of alternative sources of energy such as solar energy, wind energy, tides, waves, geothermal heat, waste incineration and other energy alternatives.

the	page
108	3

- B Skills objectives of the course.
 - B1- Identifying practically the main groups of energy alternatives.
 - B2- Practical identification of how to sustain natural resources.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

1/9/2020	8- The history of preparation of this description

The student's ability to identify how to design models that simulate environmental systems and the most important steps in preparing the model and the basic components of the environmental model and the use of Excel in the application of environmental models and obtain results to solve most environmental problems.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Identify the classifications of environmental models.
- A2- Identify the steps of the environmental model.
- A3- Identify the basic components required for the work of the environmental model.
- A4- Applying environmental models using the Excel program.
- A5- Know the role that these models play in solving environmental problems.
- A6- Know the benefits and determinants of environmental models
- B Skills objectives of the course.
 - B1- Practical identification of how environmental models work. .
 - B2- Applying environmental models in a practical manner and addressing some environmental problems.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and solving environmental problems.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

	description

The student's ability to identify the methods of treatment in the environment of water and how to benefit from it in our daily life

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- 1- Know the basic methods of treating water in the environment
- 2- Learn how to obtain clean water in a clean environment.
- 3- Identify the devices used in purification in different environments.
- 4- Knowing the effect of various environmental factors on purification methods.
- 5- Knowing the environmental role that microorganisms play in different environments in the treatment methods.
- 6 Knowing the harms and benefits of the organism's presence in different environments and how to harness it for the benefit of man.
- B Skills objectives of the course.
 - 1- Practical identification of the main methods of treatment and the extent of their application on the ground.
 - 2 To identify in a practical way how to implement and the extent of its success.

Teaching and learning methods

- 1- How to explain the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Urging the student to make PowerPoint presentations.

Evaluation methods

Theoretical, semester and final exams

C. Emotional and value goals

- 1- The ability to communicate information after monitoring and collecting data.
- 2- Linking information to environmental reality and affecting other neighborhoods.

Teaching and learning methods

- 1- How to explain the lecture and discussion
- 2- Urging the student to conduct research and reports.
- 3- Urging the student to make PowerPoint presentations.

Evaluation methods

- Daily test and reports

Monthly exams

- final exams
- Transferred general and qualification skills (other skills related to employability and personal development).
- 1- Developing the mental abilities of the student
- 2- skill development
- 3- Dealing with field and laboratory environmental measuring devices.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, demonstrating whether he has made maximum use of the available learning opportunities. It must be linked to the description of the program.

Develop the student's ability to identify the most important disasters in the environment and how to deal with them and reduce their damage.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowing the types of environmental disasters
- A2- Identify how these disasters affect the ecosystem.
- A3- Identify the role of government agencies and individuals to reduce the risks resulting from environmental disasters.
- A4- Knowing the impact of various environmental factors on the occurrence of disasters.
- A5- Knowing the impact of human activity on the types of disasters and the frequency of their occurrence.

- B Skills objectives of the course.
 - B1- Identify the most prominent risks facing the environment
 - B2- Identify the most prominent local environmental disasters

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

	description

The student's ability to know the types of organic pollutants and detect their sources in the environment, their transformations, health and environmental effects, and methods of disposing of them safely and soundly.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

B- Cognitive Objectives

- 1- Identifying the chemical composition of organic materials in the environment and methods of detection.
- 2- Identify the most important non-natural sources of organic matter in the air, water and soil and their transformations.
- 3- Identify the most important health problems resulting from organic pollutants.
- 4- Identify the methods used in the safe and proper disposal of organic materials.
- B Skills objectives of the program.
 - 1- Acquire the skills of examining organic pollutants and measuring their quantities in the air, water and soil.
 - 2- Reducing the levels of organic pollution in the environment.

Teaching and learning methods

- 1- Theoretical and practical lectures.
- 2- Use of teaching aids (presentations and scientific films)
- 3- Practicality

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- 1- The ability to communicate information after monitoring and collecting data.
- 2- Linking information to the environmental reality of the region.

Teaching and learning methods

- Direct explanation and delivery.
- Use of field and laboratory equipment and equipment.
- Powerpoint presentation. and screen.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).

The student's ability to identify polluted microorganisms groups in the environment and their environmental role and how to deal with them in our daily lives.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowledge of the basic groups of microorganisms polluting the environment
- A2- Identify how microorganisms affect different parts of the environment.
- A3- Identify the role of the microorganism that pollutes different environments.
- A4- Knowing the impact of various factors on microbial pollution in the environment.
- A5- Knowing the pollution produced by microorganisms in different environments.
- A6- Know the damages resulting from microbial contamination and how to prevent it.
- B Skills objectives of the course.
 - B1- Identifying in a practical way the main groups of microorganisms polluting the environment.
 - B2- Identify in a practical way the role of the microscopic organism polluting different environments.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- The ability to communicate information after monitoring and collecting data.

Stage IV / Environmental Awareness and 400

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

University of Basrah – College of Science	1-Educational institution		
ecology	2-Scientific Department / Center		
Environmental awareness (400)	3- Course Name/Code		
Bachelor	4- Programs in which he enters		
weekly	5- Available Attendance Forms		
2020- 2021	6- Semester / Year		
30 Credit Hours	7- Number of Credit Hours (Total)		
1/9/2020	8-The history of preparation of this description		
9- Course Objectives			

y- Course Objectives

The course aims to introduce the student to the meaning and importance of environmental awareness, its objectives, how to spread it to preserve the environment and its components and avoid the risks that can occur by explaining

important en	vironmental prob	alams and the	nhenomena o	f acosystam in	nhalance
mportant environmental problems and the phenomena of ecosystem imbalance					
and solutions	to reduce them.				

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowing the meaning of environmental awareness, its objectives and tools.
- A2- Knowing the appropriate methods to spread awareness among specialists and the general public.
- A3- Knowing the most important means of spreading environmental awareness.
- A4- Know the meaning of the environment, the components of the environment and the functions of the ecosystem.
- A5- Knowledge of living standards in the ecosystem and the relationships between living organisms.
- A6- Knowing the meaning of environmental pollution, its types and the most important phenomena that disturb the ecosystem.
- A7- Knowing the impact of each pollution, whether water, air or soil, and what are the most important sources of each of them and its effects and how to reduce it
- B Skills objectives of the course.
- B1- How to prepare a report on environmental awareness topics
- B2- How to prepare awareness posters on topics related to the environment

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.
- 4- Urging the student to make awareness posters and brochures

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - Ability to understand the meaning of environmental awareness

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities.
 - 2- Developing skill capabilities.
 - 3- Dealing with awareness reports and posters and how environmental awareness is spread.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

	preparation of this
	description
9- Course Objectives	

9- Course Objectives

The student's ability to manage solid waste and how to reuse or recycle it by scientific methods in the environment and how to benefit from it in our daily lives.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- The student's knowledge of the basic things of waste management in the environment
- A2- Identify how waste affects the different environment and how it is affected by it.
- A3- Identify the role of humans in waste management in different environments.
- A4- Knowing the impact of various environmental factors on the presence of waste in the environment.
- A5- Knowing the environmental role played by waste in different environments and its effects on humans and health.
- A6- Knowing the pros and cons of the role of waste management in different environments and how to harness it for the benefit of humans.

B - Skills objectives of the course.

- B1- Practical identification of management and reuse.
- B2- Identifying in a practical way the role of humans in how to treat waste.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Theoretical and practical tests by holding semester exhibitions and final exams

C. Emotional and value goals

- The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and influencing other neighborhoods.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities
 - 3- Dealing with field and laboratory environmental measuring devices.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the program description.

9 Course Objectives	

9- Course Objectives

The student's ability to learn about the set of international laws and conventions on environmental protection

- 10- Course Outcomes and Methods of Teaching, Learning and Assessment
- A- Cognitive objectives
 - A1- Knowledge of the basic groups of the concept of laws and legislations
 - A2- Identify how human interaction with the environment affects
 - A3- Identify the role of man in preserving and sustaining the environment
 - A4- Knowing the impact of violations on environmental elements

- A5- Knowledge of the role of the international community to preserve the environment
- B Skills objectives of the course.
 - B1- Theoretical identification of the most important basic rules of laws and legislation
 - B2- Theoretical identification of the most important international agreements on environmental protection

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical exams

- C. Emotional and value goals
- The ability to communicate information after discussing the educational foundations
 - Linking the foundations to the reality of societies

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

O Course Objectives	

9. Course Objectives

The student's ability to identify the groups of toxic compounds in the environment and their environmental role and how they affect living organisms and humans and how to reduce their toxic effects and get rid of their toxicity.

10.Course Outcomes and Methods of Teaching, Learning and Assessment

the page

- A- Cognitive objectives
 - A1- Knowledge of the basic groups of toxic compounds in the environment
 - A2- Identify how toxic compounds affect different parts of the environment and how they are affected by them.
 - A3- Identify the effect of toxic compounds in different environments.
 - A4- Knowing the effect of the interaction between different environmental factors on the toxicity of toxic compounds in the environment.
 - A5- Know the role that toxic compounds play in influencing living organisms
 - A6- Knowing the damage of toxic compounds to humans and their various body systems.
- B Skills objectives of the course.
 - B1- Practical identification of the main groups of toxic compounds.
 - B2- Identify in a practical way the role of toxic compounds in affecting the organism.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.

9- Course Objectives

The student's ability to identify the general principles of hydrology by describing the state of formation, distribution and transport of water in its three forms (liquid, solid and gaseous) in all parts of the biosphere within the hydrological cycle The curriculum also included modern methods in clarifying and describing each element of the hydrological cycle and making the necessary calculations in estimating it and indicating the environmental factors affecting each element of this cycle. The curriculum also included a full explanation of the most important practical methods in measuring the hydrological properties of surface water with an indication of the special calculation methods in estimating them.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Identify the foundations of hydrology.
- A2- Identify the formation, distribution and transport of water in all environments within the hydrological cycle.
- A3- Identify the theoretical and practical foundations of hydrological measurements for each element of the hydrological cycle.
- A4- Knowing the environmental conditions affecting the elements of the hydrological cycle.
- A6- Identify the water balance of surface and groundwater.

the	page
166	•

- B Skills objectives of the course.
 - B1 Acquire the skill of conducting mathematical calculations to estimate the hydrological conditions for each element of the hydrological cycle.
 - B2 Acquire the skill of planning and designing the locations of measuring stations for hydrological elements, such as the possibility of knowing the optimal number of stations measuring the amount of rain in a given area and distributing them in an accurate scientific manner within the required

weekly	5- Available Attendance
	Forms
2020- 2021	6- Semester / Year
30 credit hours	7- Number of Credit Hours
	(Total)
1/9/2020	8- The history of preparation
	of this description
9- Course Objectives	

9- Course Objectives

Identify the meaning of environmental impact, assess the environmental impact and prepare environmental impact reports.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- 1- Identify the meaning of environmental impact.
- 2- The importance of environmental impact.
- 3- Identify environmental impact assessment.
- 4- How to prepare environmental impact reports.
- 5- Terms of reference for the preparation of environmental impact.

B - Skills objectives of the course.

- 1- Acquire environmental impact assessment skills.
- 2- Contribute to the preparation of environmental impact reports

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- 1- The ability to document information after monitoring and collecting environmental data.
- 2- Linking, organizing and preparing information in assessing its environmental impacts.

Teaching and learning methods

- 1- Explanation and direct delivery.
- 2- Practical practices of environmental impact report forms.
- .والشاشة .Power point العرض التقديمي -3

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1D1 Development of the mental abilities of the student
 - D2- Skill capacity development
 - D3- Dealing with environmental information and methods of collecting, organizing, tabulating and discussing it.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the description of the programme.

9- Course Objectives

The student's ability to identify the methods or techniques used in the environment for biological treatment and how to benefit from them in our daily lives.

13- Course Outcomes and Methods of Teaching, Learning and Assessment

- A- Cognitive objectives
 - A1- Knowledge of plant methods and mechanics used in treatment in the environment
 - A2- Identify how plants and microorganisms affect different parts of the environment and how they are affected by them.
 - A3- Identify the reasons for the spread of biological methods in treatment.
 - A4- Knowing the impact of various environmental factors on the presence of microorganisms in the environment and their participation with plants for treatment
 - A5- Knowing the environmental role played by plants in different environments and reducing pollution.
 - A6- Knowing the harms and benefits of the presence of plants in different environments and how to harness them for the benefit of humans.
- B Skills objectives of the course.
 - B1- Practical identification of the main groups of plants.
 - B2- Identify a practical picture of the role of plants in the biological treatment of pollutants in the environment.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
- The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and influencing other neighborhoods.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d. General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities
 - 3- Dealing with field and laboratory environmental measuring devices.

Fourth Stage / Remote Sensing and GIS J465

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the description of the programme.

University of Basrah - College of Science	1. Educational institution
Ecology	2. Scientific Department / Center
Remote Sense and GIS (465)	3. Course Name / Code
Bachelor	4. Programs in which he enters
weekly	5. Available Attendance Forms

the page

First Semester 2020-2021	6. Semester / Year
30 credit hours	7. Number of Credit Hours (Total)
2020/9/1	8. The history of preparation of this description

9. Course Objectives

Give the student general knowledge of the characteristics and features of remote sensing science and what are the benefits and scientific applications of this applied science. As well as identifying the types of these systems, the electromagnetic spectra used in these systems, air windows, types of targets and methods of data analysis.

10.Course Outcomes and Methods of Teaching, Learning and Assessment

- A- Cognitive objectives
- 1. Identify the characteristics and features of remote sensitics.
- 2. Identify the elements of remote sensing systems.
- 3. Identify the types of systems and their methods of operation.
- 4. Identify the properties and features of electromagnetic radiation.
- 5. Identify the types of electromagnetic spectrum that can be used in these systems.
- 6. Recognize aerial windows.
- 7. Identify the characteristics and types of targets on the surface of the earth.
- 8. Learn about data analysis methods for these systems.
- 9. Identify the characteristics and features of geographic information systems.
- 10. Study some applications.
- B Skills objectives of the course.

Writing scientific reports and research for a specific application of remote sensing systems.

Teaching and learning methods

- The method of explaining the lecture and discussion.
- Urging the student to conduct research and reports.

Evaluation methods

Semester and final theoretical exams

- C. Emotional and value goals
 - The ability to communicate information clearly and easily .
- Linking scientific information and concepts with reality and natural phenomena.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

- -Daily testing and reports
- -Monthly tests
- Final exams
- d . General and rehabilitative skills transferred (other skills related to employability and personal development).
 - 1- Developing the student's mental abilities
 - 2- Developing skill capabilities
 - 3- Dealing with measuring devices if available.

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he or she has made the most of the available learning opportunities. It must be linked to the description of the programme.

	of this description
9- Course Objectives	

the	page
400	

Develop the student's ability to identify the types of industrial pollutants in the environment, their sources and how to treat them before and after they are released to the environment.

10- Course Outcomes and Methods of Teaching, Learning and Assessment

A- Cognitive objectives

- A1- Knowledge of basic industries and what they put forward in the environment
- A2- Identify how these pollutants affect the ecosystem.
- A3- Identify the role of regulatory authorities and individuals to reduce pollution.
- A4- Knowing the impact of various environmental factors on the concentration of these pollutants in the environment.
- A5- Knowing the methods of establishing industrial facilities in a sound manner that is not harmful to the environment.
- A6- Knowing the conditions that must be met in industrial environments.
- A7- Knowing the most important methods of treating these pollutants
- B Skills objectives of the course.
 - B1- Identifying the most prominent local industrial establishments in the field.
 - B2- Practical identification of methods of measuring these pollutants in the environment.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods

Semester and final theoretical and practical exams

- C. Emotional and value goals
 - The ability to communicate information after monitoring and collecting data.
- Linking information to environmental reality and influencing other neighborhoods.

Teaching and learning methods

- 1- The method of explaining the lecture and discussion.
- 2- Urging the student to conduct research and reports.
- 3- Encourage the student to conduct PowerPoint presentations.

Evaluation methods
