Description form of the academic program

This academic program description provides a necessary summary of the most important characteristics of the program and the learning outcomes that the student is expected to achieve, demonstrating whether he has made the most of the available opportunities

| | |
|--|--|
| 1. Educational institution | University of Basra - College of Science |
| 2. Scientific department/center | physics department |
| 3. Name of the academic or professional program | General physics |
| 4. Name of the final certificate | Bachelor of Science in Physics |
| 5. Academic system: Annual/courses/others | Courses |
| 6. Accredited accreditation program | Abet |
| 7. Other external influences | Many official holidays |
| 8. Date the description was prepared | |
| 9. Objectives of the academic program | |
| | 1- Teaching the student the basic principles of physics |
| | 2- The educational objectives of the program (printed) and are in line with the vision of the educational institution |
| | 3- Preparing an educated generation that is armed with science and adopts it as a sound basis for bringing about radical changes and adopts scientific knowledge and the scientific method in thinking, analyzing, and adapting to the development of technologies to keep pace with the expansion of human needs. |
| | 4- Providing an academic climate suitable for study and research, enabling the student to pursue his higher studies and contribute to finding solutions to problems using appropriate and suitable techniques. |
| | 5- The program must have a continuous evaluation process for programmed time periods that show that the goals are based on needs. |
| | 6- Preparing specialists in general physics and its practical applications, who are responsible for studying the country's need for development and progress and who can meet the needs of the labor market in state institutions and industry sectors. |
| | 7- There must be a continuous calibration and evaluation process for all components of the program, which shows the desired degree and based on which the goals were set. |
| 10. | 11. Required program outcomes and teaching, learning and evaluation methods |
| | A- Cognitive objectives 1- Make the student able to know and understand the basics of physics. 2- Make the student able to know and understand the practical applications of physics. |

| | <p>3- Make the student able to understand physical phenomena from a mathematical point of view.</p> <p>4- Make the student able to know and understand the basics of physics using modern software.</p> | | | | |
|-------------------|--|----------------------|------------------------------------|-------------|-----------|
| | <p>B - The program's skill objectives</p> <p>1 - Correct scientific research.</p> <p>2 - Constructive scientific discussions and expressing opinions.</p> <p>3 - Enabling the student to understand and solve scientific problems related to physical laws</p> <p>4- The ability to apply the theoretical and practical experience gained from his studies in the areas of practical life, considering industrial and commercial constraints.</p> | | | | |
| | <p>Teaching and learning methods</p> | | | | |
| | <p>1- Use a drawing board and pen.</p> <p>2- Presenting lectures using Power Point.</p> <p>3- Using practical study methods for students through the practical laboratories available in the department and under the supervision of the academic staff.</p> <p>4- Graduation projects.</p> | | | | |
| | <p>Evaluation methods</p> | | | | |
| 11. | <p>1- Follow up on daily attendance</p> <p>2- Conducting daily tests</p> <p>3- Monthly tests</p> <p>4- Final exam</p> | | | | |
| 12. | <p>13. Program structure</p> | | | | |

First level: Principles of Mechanics, 101 PH

Course description form

Course description

Studying the behavior of particles whose speed is less than the speed of light. That is, describing the physical properties of objects. The study is divided into two parts, which deals with:

1-Studying movement by studying its properties such as speed, displacement, and acceleration. This part is part of what is called kinematics.

2-Studying the causes of movement, that is, studying the relationship between movement and its causes by studying Newton's laws and the laws of conservation of energy and momentum. This part of the study falls within what is called dynamics.

| | |
|-------------------------------------|--|
| 1. Educational institution | University of Basrah- College of Science |
| 2. Scientific department/center | Physics |
| 3. Course name/code | Principles of Mechanics Ph 101 |
| 4. Programs in which it is included | Bachelor's, Master's, Doctorate |
| 5. Available attendance forms | Weekly |
| 6. Semester/year | 2020-2021 |
| 7. Number of study hours (total) | 60 credit hours |
| Date this description was prepared | 2020-9-1 |

1. Course objectives

1-Studying movement by studying its properties such as speed, displacement, and acceleration. This part is part of what is called kinematics.

2-Studying the causes of movement, that is, studying the relationship between movement and its causes by studying Newton's laws and the laws of conservation of energy and momentum. This part of the study falls within what is called dynamics.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

Introducing the student to an introduction to the principles of classical mechanics

Studying movement by studying its properties such as speed, displacement, and acceleration, and this part is part of what is called kinematics.

Studying the causes of movement, that is, studying the relationship between movement and its causes by studying Newton's laws and the laws of conservation of energy and momentum. This part of the study falls within what is called dynamics.

Second level: Analytical Mechanics,Phy 201

Course description form

Course description

Analytical mechanics is a subfield of mathematical physics that uses analytical techniques, particularly calculus of variations, to solve problems in mechanics. As a result, instead of solving equations in vector quantities, they include solutions of differential equations in scalar quantities.

| | |
|--------------------------------------|--|
| 1. Educational institution | University of Basrah- College of Science |
| 2. Scientific department/center | Physics |
| 3. Course name/code | Analytical Mechanics,Phy 201 |
| 4. Programs in which it is included | Bachelor's, Master's, Doctorate |
| 5. Available attendance forms | Weekly |

| 7.Number of study hours (total) | 60credit hours |
| 8.Date this description was prepared | 2020-9-1 |

1. Course objectives

The course aims to introduce students to the motion of dynamical systems that are typically described in terms of two fundamental quantities: scalars and vectors. The vector is the position vector r of a moving particle and the parameter is time t , the derivative of r with respect to t is called velocity v , the time derivative of velocity is called acceleration a . Isaac Newton's three fundamental laws of motion describe a damped harmonic oscillator. Explain the movement of charged particles in electric and magnetic fields. Newton formally announced the law of universal gravitation in his Principia . To prove Kepler's first law, the differential equation of the particle's orbit in any available central force field. Explain the center of mass and linear momentum of the system. I decided to use it as the basic Lagrange equations and Hamiltonian equations. Rotation of a rigid body about an arbitrary axis: moments and products of angular momentum, inertia, and kinetic energy.

11.Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

Introduce students to the motion of dynamical systems that are typically described in terms of two basic quantities: scalars and vectors.

The student introduces Newton's three basic laws of motion, a damped harmonic oscillator.

Explain the movement of charged particles in electric and magnetic fields.

Prove Kepler's first law, the differential equation of the orbit of a particle in any central force field

B - The skills objectives of the course.

B1 - Reasoning to describe dynamic systems and explain the movement of particles using basic theories and hypotheses

Teaching and learning methods

1-Theoretical lectures and discussions

) 2-Using educational means (scientific presentations and films

Evaluation methods

1-Daily tests

2-Monthly tests

3-Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

C2- Linking the given information to applied models

Teaching and learning methods

1-Explanation and direct delivery of lectures

2-Powerpoint presentation and screen

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3-Final exams

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

D2 Understanding dynamic systems and their evolution.

10. Infrastructure

| | |
|--|---|
| | 1- Required prescribed books |
| 2- Main references (sources) | 1] Analytical Mechanics, 7ed, by G. Fowles & G. Cassiday [2] Theoretical Physics 2 (Analytical Mechanics), by Wolfgang Nolting |

enth

11- Course development plan

Communicating in developing the curriculum based on recent versions of books and references.
Adopting modern interactive teaching methods.
Activating twinning programs with international universities to learn about modern teaching curricula and methods and exchange experiences

Second level: Electricity and Magnetism, Ph203

Course description form

Course description

The course description focuses on magnetic fields and their relationship to electric fields.

Calculating the magnetic fields arising from direct electric current and their applications in circuits through the Biot-Svart law and studying magnetic induction extensively.

Studying transient currents in circuits (resistance-amplitude) and resistance-inductance-amplitude circuits and knowing the states of growth and decay of current in them.

| | |

Level 2 Physical Optics Ph204

Course description form

Course description

Teaching students the principles, theoretical foundations, and practical applications of physical optics related to wave motion and wave superposition, then the phenomena of interference, diffraction, and polarization of light.

| | |
|---|---|
| 1.Educational institution | 1. University of Basra - College of Science |
| Scientific department /center | Physics |
| 3. Course name/code | Physical Optics P204 |
| 4.Programs in which it is included | Bachelor's, Master's, Doctorate |
| 5.Available attendance forms | weekly |
| 6.Semester/year | 2020-2021 |
|)7.Number of study hours (total | 60 credit hours |
| 8.Date this description was prepared | 2020-9-1 |
| 2. 9.Course objective | |
| Teaching students the principles, theoretical foundations, and practical applications of physical optics related to wave motion and wave superposition, then the phenomena of interference, diffraction, and polarization of light. | |

Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

.The student's introduction to the optical phenomena of interference, diffraction, and polarization of light

Knowledge of the principles, theoretical foundations and practical applications of physical optics related to wave motion and wave superposition

B - The skills objectives of the course .

B1-Acquiring the skill of comparing visual phenomena-

Teaching and learning methods

1.Theoretical lectures and discussions

2.Using educational tools (presentations and scientific films)

Evaluation methods

.1.Daily tests and laboratory reports

2.Monthly test

3.Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

C2- Linking information to the environmental reality and the Earth's system and the extent of its impact on different organisms

Teaching and learning methods

1.Explanation and direct delivery of lectures

Presentation **2.Powerpoint** and screen

Evaluation methods

1.Daily tests and laboratory reports

2.Monthly tests

3.Final exams

D.General and qualifying transferable other skills related to employability and personal development skills (other skills related to employability and personal development)

D1- Developing the student's mental abilities

Development and practical applications of physical optics related to wave motion and wave superposition

10. Course structure

| Evaluation method | Teaching method | Name of the unit/topic | Required learning outcomes | hours | the week |
|--------------------------------|-------------------------|--|-------------------------------------|----------------------|---|
| Daily and monthly tests | Theoretical + practical | Wave equation Wave equation and principle of superposition of waves Principle of superposition of waves | Student understanding of the lesson | 3 N + 3 D every week | the first And the second And the third |
| Daily and monthly tests | Theoretical + practical | Light interference Wave front splitters | Student understanding of the lesson | 3N + 3 D every week | Fourth fifth And the sixth |
| Daily and monthly tests | Theoretical + practical | Wave amplitude splitters Multiple packet interference | Student understanding of the lesson | 3N + 3 D every week | Seventh and eighth |
| Daily and monthly tests | Theoretical + practical | diffraction Fraunhofer diffraction | Student understanding of the lesson | 3N + 3 D every week | The ninth and tenth |
| Daily and monthly tests | Theoretical + practical | Fresnel diffraction polarization | Student understanding of the lesson | 3N + 3 D every week | eleventh And the twelfth |
| Daily and monthly tests | Theoretical + practical | Second semester exam | Student understanding of the lesson | 3N + 3 D every week | Thirteenth |
| Daily and monthly tests | Theoretical + practical | Polarization methods + Mathematical representation of polarized light and polarizers | Student understanding of the lesson | 3N + 3 D every week | fourteenth And the fifteenth |

second Level Fundamentals of Electronics PH 208

Course Description Model

Course Description

Introduction to semiconductor materials, their types, and their applications in electronic circuits. Introduction to some applications of semiconductor materials, which is the bipolar diode, its specifications, applications, and types, such as the Zener diode, the solar cell diode, and the light-emitting diode. Analysis of bipolar diode circuits and identification of its current-voltage characteristic. Also, studying the bipolar junction transistor in terms of its connection to electronic circuits, its applications, types, and uses.

| | |
|--|--|
| 1-educational institution | University of Basra- College of Science |
| 2-the scientific section/center | Physics |
| 3-name/code of the course | Fundamentals of Electronics |
| 4- the programs that it enters into | bachelor's, master's and doctorate degree |
| 5- available attendance forms | weekly |
| 6-year | 2021-2020 |
| 7- number of study hours | 60 hours |
| 8- date of description | 1/9/2020 |
| 9- course objectives | Study of semiconductor diodes and their types and applications, and study of bipolar junction transistors and their types, how they work, and their applications in electronic circuits.. |

10- Learning outcomes, teaching and learning methods, and assessment

a- cognitive goals

- introduction to Basic Electronic Components for Students

- Definition of a Crystal Diode and Its Type

-Study of the Applications of Crystal Diodes

-Study of Bipolar Junction Transistors and Their Types

-How Transistors Work and Their Applications in Electronic Circuits

| |
|--|
| b- Specific Course Skills Objectives |
| 1- Acquiring the skill of practical application of theoretical knowledge in the laboratory to create electronic circuits." |
| 2- Inference of the types of crystalline diodes and transistors and the difference between their types |
| Methods of Teaching and Learning |
| 1- Theoretical lectures and discussions |
| 2- Use of educational materials (presentations and scientific films) |
| Methods of assessment |
| 1- Daily tests and laboratory reports |
| 2- Monthly tests |
| 3- Final exams |
| c- Affective and value goals |
| 1- The ability to convey information after presenting, discussing, and interpreting it |
| Methods of Teaching and Learning |
| 1-Direct explanation and delivery of lectures |
| 2-Presentation power point and screen |
| d-General and transferable skills (other skills related to employability and personal development |
| 1- developing the student's mental abilities) |

| 11-course structure | | | | | |

Level two Thermodynamic V212

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

| | |
|--|---|
| 1. Educational Institution | University of Basrah - College of Science |
| 2. Scientific Department/ Center | Physics |
| 3. Name/code of the course | Thermodynamic V212 |
| 4. Programs that include | bachelor's degree |
| 5. Attendance forms available | Weekly |
| 6. Semester/year | 2020-2021 |
| 7. The total number of study hours credit | 45 credit hours |
| 8. The date this description was prepared | 1-9-2020 |
| 9. Course objectives | |
| It is interested in the study of energy and its transformations, as well as the study of the analysis of the properties of a substance that is affected by temperature change. | |

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

- Introduce the student to thermodynamics and thermodynamic processes.

B - The skills objectives of the course

- B1 – Acquire the skill of knowledge of thermodynamic processes.

Teaching and learning methods

- 1.Future lectures and discussions
- 2.Using educational means (scientific presentations and films)

Evaluation methods

- 1-Daily tests and laboratory reports
- 2-Monthly tests
- 3- Final exams

C- Emotional and value objectives

- C1- The ability to convey information after presenting it, discussing it, and interpreting it

Teaching and learning methods

- 1-Direct explanation and delivery of lectures.
- 2- Power point presentation and screen.

Evaluation methods

- 1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

10. Course structure

| Evaluation method | Teaching method | Name of the unit/topic | Required learning outcomes | Hours | Week |
|--------------------------------|-----------------|---|-------------------------------------|-------|---|

Second level: Geophysics, V227

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

| | |
|---|----------|
| | |
| 1. F 10. Course outcomes and teaching, learning and evaluation methods | |
| A- Cognitive objectives *Introducing the student to an introduction to the Earth's physical components, Earth's atmosphere and layers, and the formation of the Earth's surface * Introducing the student to the geophysical processes that occur in the interior of the Earth and their effects on the Earth's surface * Introducing the student to the most important safety conditions and the initial procedures followed when natural disasters occur | |
| 6. SB - The skills objectives of the course B1 - Acquire the skill of diagnosing geological risks B2 - Inferring methods of safety and protection of the ecosystem through knowledge of the safety and prevention procedures followed during disasters | |
| | 1-9-2020 |
| Teaching and learning methods | |
| 1.Future lectures and discussions 2.Using educational means (scientific presentations and films) | |
| Evaluation methods | |
| 1-Daily tests and laboratory reports | |

2-Monthly tests

3- Final exams

C- Emotional and value objectives

C1- The ability to convey information after presenting it, discussing it, and interpreting it

C2- Linking information to the environmental reality, the Earth system, and the extent of its impact on various living organisms

Teaching and learning methods

1-Direct explanation and delivery of lectures.

2- Power point presentation and screen.

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

D2 Understanding subsurface and subsurface physical geological processes

Identify geological risks and their impact on the biosphere

10. Course structure

| Evaluation method | Teaching method | Name of the unit/topic | Required learning outcomes | hours | Week |

Level Three: Quantum Mechanics, P301

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

| | |
|---|---|
| 1. Educational Institution | University of Basrah - College of Science |
| 2. Scientific Department/ Center | Physics |
| 3. Name/code of the course | Quantum Mechanics P301 |
| 4. Programs that include | bachelor's ,Master's |
| 5. Attendance forms available | Weekly |
| 6. Semester/year | 2020-2021 |
| 7. The total number of study hours credit | 45 credit hours |
| 8. The date this description was prepared | 1-9-2020 |
| 9. Course objectives | <p>The course in 301 aims to provide the student with an understanding of the group of physical theories that appeared in the twentieth century to explain phenomena at the atomic level or below. These theories combined the particle property and the wave property to reveal the term wave-particle duality. Thus, the responsibility of quantum mechanics becomes the physical interpretation at the atomic level.</p> |

| |

Forth Level Quantum mechanics PH 401

Course Description Model

Course Description

This course description provides a concise summary of the course's key features and the learning outcomes that students are expected to achieve, demonstrating whether they have made the most of the learning opportunities available. It is necessary to link them to the program description.

| | |
|--|--|
| 1-educational institution | University of Basra- College of Science |
| 2-the scientific section/center | Physics |
| 3-name/code of the course | Principles of Electricity and Magnetism |
| 4- the programs that it enters into | bachelor's ,master's degree |
| 5- available attendance forms | weekly |
| 6-year | 2021-2020 |
| 7- number of study hours | 60 hours |
| 8- date of description | 1/9/2020 |

9- course objectives

The course is designed for fourth-year students and includes four chapters. Chapter 1 is dedicated to the study of quantum mechanics in three dimensions, and includes a detailed study of angular momentum and orbital angular momentum (spin). Chapter 2 provides an in-depth study of time-independent perturbation theory, with examples of calculating the energy and wave functions of bound and unbound states. Chapter 4 explains the semiclassical approximation, also known as the WKB approximation, and provides a study of the classical region and an explanation of the quantum tunneling phenomenon.

10- Learning outcomes, teaching and learning methods, and assessment

a- cognitive goals

Definition of quantum mechanics in three dimensions

Definition of Schrödinger equation in spherical coordinates

Definition of hydrogen atom

b- Specific Course Skills Objectives

1- Acquiring the skill of knowing the details of electricity and magnetism

2- The study of Coulomb's law is extremely important because it provides

information about static electricity, how to calculate electrostatic force, and how to determine the resultant of these forces.

Methods of Teaching and Learning

1- Theoretical lectures and discussions

2- Use of educational materials (presentations and scientific films)

Methods of assessment

1- Daily tests and laboratory reports

2- Monthly tests

3- Final exams

c- Affective and value goals

1- The ability to convey information after presenting, discussing, and interpreting it

Methods of Teaching and Learning

1-Direct explanation and delivery of lectures

2-Presentation power point and screen

d-General and transferable skills (other skills related to employability and personal development

1- developing the student's mental abilities)

| 11-course structure | | | | | |

| Scientific department /center | physics |
| 3. Course name/code | Statistical Physics P409 |
| 4.Programs in which it is included | Bachelor's degree, Master's degree |
| 5.Available attendance forms | weekly |
| 6.Semester/year | 2020-2021 |
|)7.Number of study hours (total | 30 credit hours |
| 8.Date this description was prepared | 2020-9-1 |

4. 9.Course objective

It aims to divide the physical properties into apparent ones that can be measured directly and microscopic ones that can be measured indirectly. These properties are linked to the movement of huge numbers of particles, making it impossible to use equations that describe the detailed movement of particles to calculate them .The task of statistical physics is to calculate apparent properties in terms of microscopic properties without the need to perform detailed calculations of the movement of these particles.

Course outcomes and teachin, learning and evaluation methods

A- Cognitive objectives

✓ **Deriving distribution laws for classical and quantitative statistics.**

Prove the principle of equal energy distribution and its application in calculating the specific heat of gases

The contribution of electrons to the specific heat of metals.

.Apply the Bose-Einstein distribution to learn about the properties of a superfluid and the behavior of helium, for example, as a superfluid at a temperature less than 2.19 K

B - The skills objectives of the course .

.B1 - Acquire the skill of applying distribution laws in calculating rates of various physical properties

B2- Derivation of the Fermi-Dirac distribution law and identifying the properties of the Fermi function and the fermionic gas

B3-Solving the apparent contradiction of compression and deriving a formula for entropy according to the classical objective

Teaching and learning methods

1.Theoretical lectures and discussions

2.Using educational tools (presentations and scientific films)

Evaluation methods

1.Daily tests and laboratory reports

2.Monthly test

3.Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

C2-- Linking information to the environmental reality and the Earth's system and the extent of its impact on different organisms

Teaching and learning methods

1.Explanation and direct delivery of lectures

Presentation **2.Powerpoint** and screen

Evaluation methods

.1.Daily tests and laboratory reports

2.Monthly tests

3.Final exams

-D.General and qualifying transferable other skills related to employability and personal development skills (other skills related to employability and personal development)

D1- Developing the student's mental abilities

D2- Defining virtual and microscopic properties with examples and explaining the necessity of statistical physics

D3- Defining bosons and fermions, identifying their properties, and deriving the Bose-Einstein distribution law and the bosonic gas.

8. 9.Course objective

Identify the most important special functions (gamma, beta, and error) and use them to , solve a wide range of limited integrals .Solving the Bessel and Legendre differential equations and their applications in problems of potential and electromagnetic fields. Identify Laplace transforms , their inverses , and theorems and use them in solving electrical circuit problem.

19. Course outcomes and teachin, learning and evaluation methods

A- Cognitive objectives

- ✓ **Developing the student's skills in calculating different types of definite integrals using special functions**
- ✓ **Improving student experiences in solving differential equations**
- ✓ **Introducing the student to the importance of Laplace transforms in analyzing electrical circuits**

B - The skills objectives of the course .

B1 - Acquiring the skill of solving Legendre's equations and Legendre's manifolds.

B2 - The ability to solve Laplace's equations

Teaching and learning methods

1.Theoretical lectures and discussions

2.Using educational means (scientific presentations and films)

Evaluation methods

1.Daily tests and laboratory reports

Monthly tests 2.

3.Final exams

C- Emotional and value goals

The ability to communicate information after presenting it, interpreting it ,and discussing it

Teaching and learning methods

Level 4

Advanced solid-state physics Phy428

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available.

| | |
|--|---|
| 1. Educational institution | University of Basrah - College of Science |
| 2. Scientific department/center | Physics |
| 3. Course name/code | Advanced solid-state physics Phy428 |
| 4. The programs it participates in | Bachelor's, Master's, Doctorate |
| 5. Available forms of attendance | weekly |
| 6. Semester/year | 2020-2021 |
| 7. Number of study hours (total) | 30 credit hours |
| 8. Date of description preparing | 1-9-2020 |
| 9. Course objectives | |
| <p>The study of advanced solid state physics, which includes the physical properties of solid matter (metals, semiconductors, insulators), discusses the model of free electrons and electric current when an external field is applied to the participation of electrons in calculating specific heat. It is also an introduction to important concepts of the Fermi surface level, which will be used to refine the method of describing and treating electrical and thermal conductivity in metals. It also explains the traditional model of the free electron gas (classical theory), the quantum theory of free electrons, the perceptual state of the electron gas, and the effect of the magnetic field on the movement of free electrons. Therefore, studying the origin of bands in solid materials is a very important topic that helps us understand the electrical, thermal, and optical properties of solid materials, in addition to knowing the structure of bands. Explaining the alternating electrical conductivity of matter in the presence of an alternating electric field, and this conductivity being closely linked to optical properties, covers the term “photoelectricity” at a range of frequencies, which is not limited to the visible range only, but extends from the high-frequency range to the low-frequency range.</p> | |
| 10. Course outcomes and teaching, learning and evaluation methods | |
| A- Cognitive objectives: | |
| <ul style="list-style-type: none"> ✓ Introduce the student to an introduction to solid-state physics ✓ Improving many of the physical properties of some materials, so that new metal alloys can be obtained that are characterized by high resistance to impact loads. The property of electrical conductivity in some semiconductors is also due to the presence of a small amount of impurity atoms. These defects also cause color centers in some materials, which makes them suitable for many technology applications. This is in addition to the connection between photo-luminescence and these impurities. | |
| B - The skills objectives of the course: | |
| <ol style="list-style-type: none"> 1- Acquire the skill of calculating the electrical conductivity of materials. 2- Acquiring the skill of calculating the thermal conductivity of materials. | |
| Teaching and learning methods: | |
| <ol style="list-style-type: none"> 1-Theoretical lectures and discussions. 2-Using educational means (scientific presentations and films). | |
| Evaluation methods: | |
| <ol style="list-style-type: none"> 1-Daily tests and laboratory reports. 2-Monthly tests. 3- Final exams. | |
| C- Emotional and value goals | |
| C1- The ability to communicate information after presenting it, discussing it, and | |

interpreting it.

Teaching and learning methods

- 1--Direct explanation and delivery of lectures.
- 2- PowerPoint presentation and screen.

Evaluation methods

- 1-Daily tests and laboratory reports.
- 2-Monthly tests.
- 3- Final exams.

D - Transferable general and qualifying skills (other skills related to employability and personal development).

Developing the student's mental abilities.

11. Course structure

| Week | Hours | Required learning outcomes | Name of the unit/topic | Teaching method | Evaluation method |

| 6. Semester/year | 2020-2021 |
| 7. Number of study hours (total) | 30 credit hours |
| 8. Date of description preparing | 1-9-2020 |
| 9. Course objectives | |
| Calculating the rotational, vibrational and molecular electronic transition spectra | |
| 10. Course outcomes and teaching, learning and evaluation methods | |
| <i>A- Cognitive objectives:</i> | |
| <ul style="list-style-type: none"> ✓ Introduce the student to an introduction to molecular physics. ✓ Introducing the student to how the molecular rotation spectrum arises because of the movement of atoms bonded together within the molecule around a specific axis. ✓ Study of particles that are classified as a symmetrical rigid rotor, which has a moment of inertia different from the linear and spherical case. ✓ Identify the nature of molecular vibration. Molecular vibration, which represents the change in the length of bonds between neighboring atoms in a single molecule, as if this process occurs within a limited range between the two atoms in proximity. | |
| <i>B - The skills objectives of the course:</i> | |
| 1- Acquire the skill of recognizing the details of molecular physics. | |
| <i>Teaching and learning methods:</i> | |
| 1-Theoretical lectures and discussions. 2-Using educational means (scientific presentations and films). | |
| <i>Evaluation methods:</i> | |
| 1-Daily tests and laboratory reports. 2-Monthly tests. 3- Final exams. | |
| <i>C- Emotional and value goals</i> | |
| C1- The ability to communicate information after presenting it, discussing it, and interpreting it. C2- Linking information to the environmental reality and the Earth's system and the extent of its impact on different organisms. | |
| <i>Teaching and learning methods</i> | |
| 1--Direct explanation and delivery of lectures. 2- PowerPoint presentation and screen. | |
| <i>Evaluation methods</i> | |
| 1-Daily tests and laboratory reports. 2-Monthly tests. 3- Final exams. | |
| D - Transferable general and qualifying skills (other skills related to employability and personal development). | |
| Developing the student's mental abilities. | |

| 11. Course structure | | | | | |
|---|---------------|---|--|------------------------|--------------------------|
| Week | Hours | Required learning outcomes | Name of the unit/topic | Teaching method | Evaluation method |
| 1 ^s , 2 nd , 3 rd | 2-theoretical | The student's understanding of the lesson | The theoretical aspect Rotational spectrum Rotational movement of particles Rotational energy levels | Theoretical | Daily and monthly tests |
| 4 th , 5 th , 6 th | 2-theoretical | The student's understanding of the lesson | The theoretical aspect The particles are like a solid, spherical rotor Molecules as a symmetrical rigid rotor Centrifugal deformation | Theoretical | Daily and monthly tests |
| 7 th , 8 th | 2-theoretical | The student's understanding of the lesson | Semester exam The theoretical aspect Molecular vibration spectrum | Theoretical | Daily and monthly tests |
| 9 th , 10 th | 2-theoretical | The student's understanding of the lesson | The theoretical aspect Convergence of energy levels Rotational vibration. | Theoretical | Daily and monthly tests |
| 11 th , 12 th | 2-theoretical | The student's understanding of the lesson | The theoretical aspect Electronic transfers | Theoretical | Daily and monthly tests |
| 13 th | 2-theoretical | The student's understanding of the lesson | Second chapter exam | Theoretical | Daily and monthly tests |
| 14 th , 15 th | 2-theoretical | The student's understanding of the lesson | The theoretical aspect Fibrotic transfers Why electronic composition? | Theoretical | |

| 12. Infrastructure | |
|--|---|
| 1- Required prescribed books | |
| 2- Main references (sources) | 1- Atoms, Molecules and Photons: An Introduction to Atomic, Molecular and Quantum Physics by Wolfgang Demtröder 2- ASTRONOMICAL SPECTROSCOPY; An Introduction to the Atomic and Molecular Physics of Astronomical Spectra by JONATHAN TENNYSON |
| A - Recommended books and references (scientific journals, | |

| | |
|---|--|
| reports,...) | |
| B - Electronic references, Internet sites... | |
| 13. Course development plan | |
| Communicating in developing the curriculum based on recent versions of books and references. Adopting modern interactive teaching methods. Activating twinning programs with international universities to learn about modern teaching curricula and methods and exchange experiences | |

Level 4

Plasma physics Phy447

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available.

| 1. Educational institution | University of Basrah - College of Science | | | | |
|---|---|------------------------------------|---|-----------------|-------------------------|
| 2. Scientific department/center | Physics | | | | |
| 3. Course name/code | Plasma physics Phy447 | | | | |
| 4. The programs it participates in | Bachelor's, Master's, Doctorate | | | | |
| 5. Available forms of attendance | weekly | | | | |
| 6. Semester/year | 2020-2021 | | | | |
| 7. Number of study hours (total) | 30 credit hours | | | | |
| 8. Date of description preparing | 1-9-2020 | | | | |
| 9. Course objectives | | | | | |
| Study of how plasma is formed and its most important applications. | | | | | |
| 10. Course outcomes and teaching, learning and evaluation methods | | | | | |
| A- Cognitive objectives: | | | | | |
| ✓ Introducing the student to an introduction to states of matter, including the fourth state, which is plasma. | | | | | |
| B - The skills objectives of the course: | | | | | |
| 1- Acquire the skill of knowing the details of the fourth state of matter, which is plasma. | | | | | |
| Teaching and learning methods: | | | | | |
| 1-Theoretical lectures and discussions. 2-Using educational means (scientific presentations and films). | | | | | |
| Evaluation methods: | | | | | |
| 1-Daily tests and laboratory reports. 2-Monthly tests. 3- Final exams. | | | | | |
| C- Emotional and value goals | | | | | |
| C1- The ability to communicate information after presenting it, discussing it, and interpreting it. C2- Linking information to the environmental reality and the Earth's system and the extent of its impact on different organisms. | | | | | |

| 12. Programs in which it is entered | Bachelor’s, Master’s, Ph.D |
| 13. Attendance forms available | weekly |
| 14. Semester/year | 2020-2021 |
| 15. The total number of study hours | 30 hours |
| 16. The date this description was prepared | 1-9-2020 |
| 17. Course objectives | |

It aims to study different types of nuclear radiation detectors and study their working mechanism...and methods and methods of detection, in addition to the most important types of radiation and ways of interacting with matter.

23. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

- ✓ Introducing the student to nuclear radiation detectors.
- ✓ Introducing the student to the processes that occur within these reagents.
- ✓ Study the effect of nuclear reagents on ecosystem change.
- ✓ Introducing the student to the most important safety conditions and the initial procedures followed.

B - The skills objectives of the course.

B1 - Inferring methods of safety and protection of the ecosystem by knowing how to protect against radiation.

Teaching and learning methods

1- Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

Teaching and learning methods

1-- Explanation and direct delivery of lectures.

2- Powerpoint presentation and screen .

Teaching and learning methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

D- Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

D2 Understanding the processes that occur inside nuclear detectors and the extent of their impact on the environment.

24.11. Course structure

| Week | hours | Required learning outcomes | Name of the unit/topic | Teaching method | Evaluation method |
|---|-------|--|--|-----------------|--------------------------------|
| First Second Third | H2 | Student understanding of the lesson | the theoretical side A general introduction to nuclear detectors, the interaction of radiation with matter, and lost energy | theoretical | Daily and monthly tests |
| Fourth fifth sixth | H2 | Student understanding of the lesson | the theoretical side Term Neutron interaction with matter | theoretical | Daily and monthly tests |
| Seventh and eighth | H2 | Student understanding of the lesson | First semester exam | theoretical | Daily and monthly tests |
| The ninth and tenth | H2 | Student understanding of the lesson | the theoretical side Types of reagents... Flash reagents Semiconductor reagents | theoretical | Daily and monthly tests |
| eleventh And the twelfth | H2 | Student understanding of the lesson | Second semester exam | theoretical | Daily and monthly tests |
| Thirteen th | H2 | Student understanding of the lesson | the theoretical side Neutron detectors | theoretical | Daily and monthly tests |
| | H2 | Student understanding of the lesson | | theoretical | Daily and monthly tests |
| | | 1- الكتب المقررة المطلوبة | | | |
| | | 2- المراجع الرئيسية (المصادر) | Third semester exam | | |
| | | ا- الكتب والمراجع التي يوصى بها (المجلات العلمية , التقارير ,) | | | |

| Seventh and eighth | 3n+1 p | Student understanding of the lesson | The theoretical aspect: A review of methods for biasing the transistor Transistor bias circuits (fixed bias) Transistor bias circuits (feedback bias) | theoretical | Daily and monthly tests |
| The ninth and tenth | 3n+1 p | Student understanding of the lesson | The theoretical aspect: A review of methods for biasing the transistor Transistor bias circuits (fixed bias) Transistor bias circuits (feedback bias) | theoretical | Daily and monthly tests |
| eleventh and the second ten | 3n+1 p | Student understanding of the lesson | The theoretical aspect: A review of methods for biasing the transistor Transistor bias circuits (fixed bias) Transistor bias circuits (feedback bias) | theoretical | Daily and monthly tests |
| Thirteenth | 3n+1 p | Student understanding of the lesson | Second semester exam | theoretical | Daily and monthly tests |
| Fourteenth and fifteenth | 3n+1 p | Student understanding of the lesson | The theoretical aspect: A review of methods for biasing the transistor Transistor bias circuits (fixed bias) Transistor bias circuits (feedback bias) | theoretical | Daily and monthly tests |

Level Three: Solar Energy, PHY309

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

| | |
|---|--|
| 1. Educational institution | University of Basra - College of Science |
| 2. Scientific department/center | Physics |
| 3. Course name/code | Solar energy PHY309 |
| 4. The programs in which he participates | Bachelor's |
| 5. Available forms of attendance | weekly |
| 6. Semester/year | 2021-2020 |
| 7. Number of study hours (total) | credit hours 30 |
| 8. The date this description was prepared | 2020-9-1 |
| 9. Course objectives | |

The energy of the sun is considered the main source of energy on the planet Earth, and from it it has been distributed and transformed into other energy sources, whether it is stored in wind energy, thermal energy in the ground, energy generated from waterfalls, solar energy, and other energy sources such as coal and wood, and since solar energy is the most important During the next century, the efforts of many countries will be

directed to renewable energy sources in their various forms, allocating the necessary amounts to develop products and research on exploiting solar energy as one of the most important sources of alternative energy to oil and gas. The largest share of research and applications has been given to the field of converting this source of energy from solar energy to Electricity, which is known as photovoltaics.

The availability of electrical energy has become one of the most important key factors for creating infrastructure in it, and the production of electricity from solar energy does not require centralized generation. Rather, the energy is produced and used in the same area or place, and this will save a lot of transportation costs. This method depends mainly on converting sunlight into Electrical energy. There are many materials in nature used in the manufacture of solar cells, which are combined with a specific electrical and engineering system to form what is called a solar panel, which is exposed to sunlight at a certain angle to produce the largest amount of electricity.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

Explaining the technical and physical principles of solar energy and the devices that are used to benefit from this energy, such as solar cells and solar collectors. Various solar energy technologies are also measured and evaluated by knowing the physical function of these devices and calculating the required size of solar cell systems and solar collectors for a specific energy need using appropriate software and communicating the technological, environmental, social and economic issues around solar energy in a concise and easily accessible manner.

B - The skills objectives of the course.

B1 - Acquire the skill of diagnosing electromagnetic radiation (radiation spectrum, solar constant).

B2 - Reasoning to know the factors affecting solar radiation and solar angles.

Teaching and learning methods

1-Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

Teaching and learning methods

- 1--Direct explanation and delivery of lectures.
- 2- Powerpoint presentation and screen.

Evaluation methods

- 1-Daily tests and laboratory reports
- 2-Monthly tests
- 3- Final exams

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

10. Course structure

Level 3 for PHY310 circuits

Course description form

Course description

This course description provides a summary of the most important characteristics of the course and the learning outcomes that the student is expected to achieve, demonstrating whether he or she has made the most of the learning opportunities available. It must be linked to the program description.

| | |
|--|--|
| 1. Educational institution | University of Basra - College of Science |
| 2. Scientific department/center | Physics |
| 3. Course name/code | Logic circuits F310 |
| 4. The programs in which he participates | Bachelor's |
| 5. Available forms of attendance | weekly |
| 6. Semester/year | 2021-2020 |
| 7. Number of study hours (total) | credit hours 30 |
| 8. The date this description was prepared | 2020-9-1 |
| 9. Course objectives | |
| Introducing the student to numerical systems, logic gates and their properties, how to design logic using Karnoff diagrams, defining addition and subtraction circuits, comparison circuits, and multi-output circuits such as the encoder, decoder, and multiplexer, and how to design logic circuits | |

using these circuits. Introducing the student to flip-flop circuits and their types and how to benefit from them in building counter circuits.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

□ Introducing the student to numerical systems, logic gates and their properties, how to design logic using Karnaugh diagrams, defining addition and subtraction circuits, comparison circuits, and multiple-output circuits such as the encoder, decoder, and multiplexer, and how to design logical circuits using these circuits.

□ . Introducing the student to flip-flop circuits, their types, and how to benefit from them in building meter circuits

B - The skills objectives of the course.

B1 - Acquiring the skill of calculating logic circuits.

Teaching and learning methods

1-Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

Teaching and learning methods

1--Direct explanation and delivery of lectures.

2- Powerpoint presentation and screen.

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

11. Course structure

| 9. Course objectives | |

The course X-Ray 318 studies the basic concepts of X-rays and their applications in scientific research, medicine, and industries. The course provides information on how to generate and produce X-rays, as well as studying X-ray absorbance, X-ray filters, optics and detectors, and the risks resulting from X-rays. It also studies the basic principles of diffraction and

scattering and the factors affecting the intensity of X-rays. It also includes the study of different techniques whose basic principle of operation is X-rays. X-ray techniques are used in multiple scientific, medical and industrial fields. X-ray diffraction technology is one of the techniques used in scientific research fields and determines the compositional analysis of materials, the type of material, and others. We will study both X-ray irradiation and computed tomography, which are medical X-ray techniques. In addition to other techniques, such as small-angle X-ray scattering, X-ray fluorescence, proton-stimulated X-ray emission, and X-ray photoelectron spectroscopy.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

□ The X-ray course, F318, aims to help students understand the basic concepts of X-rays and their applications in scientific research, medicine, and industries. The course provides information on how to generate and produce X-rays, as well as studying X-ray absorbance, X-ray filters, optics and detectors, and the risks resulting from X-rays. It also studies the basic principles of diffraction and scattering and the factors affecting the intensity of X-rays. It also includes the study of different techniques whose basic principle of operation is X-rays. X-ray techniques are used in multiple scientific, medical and industrial fields. X-ray diffraction technology is one of the techniques used in scientific research fields and determines the compositional analysis of materials, the type of material, and others. We will study both X-ray irradiation and computed tomography, which are medical X-ray techniques. In addition to other techniques, such as small-angle X-ray scattering, X-ray fluorescence, proton-stimulated X-ray emission, and X-ray photoelectron spectroscopy.

B - The skills objectives of the course.

B1 - Acquire the skill of X-ray diagnosis.

Teaching and learning methods

1-Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

| |
|---|
| Teaching and learning methods |
| 1--Direct explanation and delivery of lectures. 2- Powerpoint presentation and screen. |
| Evaluation methods |
| 1-Daily tests and laboratory reports 2-Monthly tests 3- Final exams |
| D - Transferable general and qualifying skills (other skills related to employability and personal development). D1- Developing the student's mental abilities |

| 7. The total number of study hours | 30 hours |
| 8. The date this description was prepared | 1-9-2020 |
| 9. Course objectives | |

It aims to study different types of nuclear radiation detectors and study their working mechanism...and methods and methods of detection, in addition to the most important types of radiation and ways of interacting with matter.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

- ✓ Introducing the student to nuclear radiation detectors.
- ✓ Introducing the student to the processes that occur within these reagents.
- ✓ Study the effect of nuclear reagents on ecosystem change.
- ✓ Introducing the student to the most important safety conditions and the initial procedures followed.

B - The skills objectives of the course.

B1 - Inferring methods of safety and protection of the ecosystem by knowing how to protect against radiation.

Teaching and learning methods

1- Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

C- Emotional and value goals

C1- The ability to communicate information after presenting it, discussing it, and interpreting it

Teaching and learning methods

1-- Explanation and direct delivery of lectures.

2- Powerpoint presentation and screen .

Teaching and learning methods

- 1-Daily tests and laboratory reports
- 2-Monthly tests
- 3- Final exams

D- Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

D2 Understanding the processes that occur inside nuclear detectors and the extent of their impact on the environment.

| 16. The total number of study hours | 45hours |
| 17. The date this description was prepared | 2020-9-1 |
| 18. Course objectives | <p>Scientific study of the planetarium (Kepler's laws, Newton's laws of motion, the geometry of the sphere, spherical triangles, the planetarium, the coordinate systems on the planetarium, the four astronomical seasons, the phenomena of staggering (the rotation of the Earth's axis) and swaying, astronomical units of measurement.)</p> <p>Study of the solar system (the physical properties of the sun, the physical properties of the moon, the phenomena of eclipses and solar eclipses, the types of planets, and the study of the physical properties of the planets. Budd's rule. Small asteroids. Meteors and meteors.)</p> <p>Knowing the values of the stars. The luminosity of the stars, the relationship of the luminosity to the luminous magnitudes. Movement of the stars, angular motion, radial velocity, tangential</p> |

velocity, space velocity, factors affecting measurements of stellar speeds. Measurement of the physical properties of stars, the relationship of the mass of stars to their luminosity. Hertzsprung diagram)
 Study of the daily apparent movement of celestial bodies. Phenomena accompanying the daily apparent movement of bodies. Sunrise and sunset. The length of the twilight period.
 Calculating solar time.

12. 10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

Introducing the student to the introduction to astronomy, planets, and stars.

B - The skills objectives of the course.

B1 - Acquiring the skill of knowledge of astronomy.

Teaching and learning methods

1-Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

2-Monthly tests

3- Final exams

| 7. Number of study hours (total) | 30 credit hours |
| 8. Date this description was prepared | 2020-9-1 |

9. Course objectives

Oriented towards preparing the bachelor's degree holder to work in government and industrial laboratories, where he possesses the ability to use and modify complex and sophisticated electronic and mechanical equipment. It provides a physics-centered perspective on making measurements and interpreting experimental data that is an important counterpoint to the perspective of construction-focused engineers and analysis-focused mathematicians. This course focuses on understanding the physics of devices and sensors used in industrial, medical, and engineering applications.

10. Course outcomes and teaching, learning and evaluation methods

A- Cognitive objectives

Introducing the student to practical physical devices.

Introducing the student to how to work with physical devices and perform measurements on them.

B - The skills objectives of the course.

B1 - Acquire the skill of working with physical devices and performing measurements on them.

Teaching and learning methods

1-Theoretical lectures and discussions.

2-Using educational means (scientific presentations and films)

Evaluation methods

1-Daily tests and laboratory reports

D - Transferable general and qualifying skills (other skills related to employability and personal development).

D1- Developing the student's mental abilities

15. Course structure
