Academic Program and Course Description Guide

2025-2024

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

Program Vision: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission:</u> Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable. **Curriculum Structure:** All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies:</u> They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

1. Program Vision

The College of Education for Pure Sciences strives to be one of the leading higher education institutions at the University of Basrah in the field of modern education and scientific research through its academic, research, and administrative activities. It also works to provide a comprehensive path for its students and faculty members, enabling them to be active and creative in serving society in the fields of physics education and its dynamic branches.

2. Program Mission

Working on preparing and graduating outstanding scientific and leadership competencies in physics and its sciences and disciplines, as well as advancing knowledge in scientific research to serve the local, regional, and international communities. Additionally, the college focuses on training and refining students' minds scientifically and intellectually, emphasizing social and cultural values, and responding to the demands of the local job market.

3. Program Objectives

- 1. Embodying the vision, mission, and objectives of the University of Basrah by implementing best educational practices with a strong focus on quality assurance, performance enhancement, and continuous improvement.
- 2. Preparing specialized cadres capable of serving the community and paving the way for future specializations.
- 3. Promoting a culture of human diversity in society, transferring knowledge and linguistic skills, fostering academic research writing, and encouraging creative scientific achievements through student- and faculty-centered activities.
- 4. The college seeks to establish scientific and cultural cooperation agreements with peer colleges and departments in various institutions to achieve best practices in teaching and learning.

- 5. Emphasizing the educational and ethical aspects of all its members, fostering a spirit of dedication, tolerance, commitment, and service to the nation.
- 6. Focusing on intellectual and cultural development by engaging with the experiences of other countries in the field of physics and its diverse applications.
- 7. Prioritizing the educational and ethical development of students, instilling a sense of dedication, tolerance, and responsibility.

8. Expected learning	outcomes of the program
Knowledge	• -
	 1- Enabling students to gain a deep understanding of physics. 2- Preparing qualified teachers to teach physics in educational institutions. 3- Training teaching staff with a high level of competence in physics. 4- Preparing physics teachers capable of keeping up with scientific advancements in the field of physics.
Skills	
	 1- Enabling students to grasp the fundamental concepts of physics. 2- Developing students' ability to analyze physical phenomena scientifically and practically. 3- Enhancing students' ability to clearly express their physics-related ideas and connect them to everyday life.
Ethics	
	 1- Enhancing critical thinking skills and systematic analysis in applying physical principles. 2- Encouraging students to explore physics-related topics and benefit from them. 3- Developing students' abilities and instilling scientific values and principles through the study of physics.

9. Teaching and Learning Strategies

- Explaining the material during the lecture.
- Clarifying concepts on the board.
- Encouraging cooperative learning through questions and discussions.
- Presenting images and explanatory videos on the screen..

10. Evaluation methods

- Weekly, monthly, and daily exams, as well as the final year exam.
- Homework assignments and oral questions.

11.Faculty

Professional Development

Mentoring new faculty members

- 1- Engaging with experienced university professors, utilizing modern teaching technologies, and structuring scientific lectures.
- 2- Continuously improving teaching methods and encouraging reading in public libraries.
- 3- Attending specialized developmental courses in this field.

Professional development of faculty members

Briefly describe the academic and professional development plan and arrangements for faculty such as teaching and learning strategies, assessment of learning outcomes, professional development, etc.

12. Acceptance Criterion

(Setting regulations related to enrollment in the college or institute, whether central admission or others)

13. The most important sources of information about the program

- 1- Sources approved by the university and counterpart colleges (Sectorial Committee).
- 2- External sources and various books from the internet or private and public libraries.

14. Program Development Plan

This academic program aims to enhance the level of faculty members, strengthen their competencies, and prepare graduates with the skills and qualifications that enable them to compete in the job market, whether in education and pedagogy or other sectors within society. Accordingly, the program seeks to achieve the following objectives:

- 1. Providing society with highly qualified teachers.
- 2. Keeping up with the latest scientific and specialized developments to ensure quality education.
- 3. Strengthening collaboration with the community to meet educational and professional needs.
- 4. Directing the educational process toward achieving community development.
- 5. Instilling ethical and professional principles in the field of teaching.

Course Description Form-Year One

1. Course Name:

Electricity

2. Course Code:

3. Semester / Year: 2024-2025

Annual

4. Description Preparation Date:

25/2/2025

5. Available Attendance Forms:

Presence

6. Number of Credit Hours (Total) / Number of Units (Total)

90 hours per year. 3 hours per week

7. Course administrator's name (mention all, if more than one name)

Name: Assist prof. Dr. Jabbar hafez Email: jabbar.jebur@uobasrah.edu.iq Name: lecturer Dr. Amjad Alshawi

Email: amjad.mohammed@uobasrah.edu.iq

8. Course Objectives

Course Objectives	1-studying the Coulombs law
	2-studying the Electric field
	3-studying the Gausses' law
	4-studying the Electric potential
	5-studying the Capacitors and insulators

9. Teaching and Learning Strategies

Strategy

- 1. Lesson Planning Define clear learning objectives and connect new topics with previous knowledge.
- 2. Visual & Technological Aids Use presentations, graphs, and simulations to explain concepts.
- 3. Interactive Teaching Engage students with discussions, real-life examples, and thought-provoking questions.
- 4. Practical Applications Conduct experiments, show videos, and encourage critical thinking.
- 5. Problem-Solving Skills Provide diverse exercises, encourage logical analysis, and promote teamwork.
- 6. Student Assessment Use quizzes, quick questions, and instant feedback to track progress.
- 7. Real-World Connections Link physics to technology, engineering, and daily life applications.

Course Description Form-Year Two

1. Course Name:
Educational administration and supervision
2. Course Code:
3. Semester / Year:
Year
4. Description Preparation Date:
27 / 2 / 2024
5. Available Attendance Forms:
Only Attendance
6. Number of Credit Hours (Total) / Number of Units (Total)
90 hours Year . 2 hours weekly
7. Course administrator's name (mention all, if more than one name)
Name: Zahraa Salman Ab-dul Hussein
Email: lec.zahraa.salman@uobasrah.edu.iq

8. Course Objectives

- 1-The student should know classroom management
- 2- The student should distinguish between scientific theory and bureaucratic theory
- 3- That the student applies what he has learned when dealing with students
- 4- That the student be able to predict and explain some of the behaviors issued by students
 - 9. Teaching and Learning Strategies

Strategy

- 1- Educational strategy, collaborative concept planning.
- 2- Brainstorming strategy
 - 3-Education Strategy Discussion Series

10. Course Structure

Week	Hour	Required Learning	Learning	Evaluation	
WCCK	S	Outcomes	Unit or subject name	method	method
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	2hours	1-Learn about development Administration 2- Identify theories Administration 3- Get to know the theory Scientific 4- Identify theories Administrative divisions 5-Learning about the theory Administrative systems 6- Get to know the theory Management as functions 7 Getting to know the administration Educational 8- Getting to know Management characteristics 9- Getting to know Management levels 10- Recognizing patterns Administration 11- Getting to know the administration Authoritarianism 12- Getting to know the administration	Management development Management theories Scientific theory The theory of administrative divisions Administrative systems theory Management theory as functions Educational administration Characteristics of educational administration Management levels Management styles Authoritarian management Chaotic management Democratic administration First semester exam Diplomatic administration Factors affectin g management Mid-year exam		Weekly, monthly, daily, written exams, and the end -of-year exam

11.Course Evaluation

Distribution is as follows: 25 marks for monthly and daily exams for the first semester. 25 marks for monthly and daily exams for the second semester. 50 marks for final exams

		electricity and magnetism 2-Teaching the student the ideas and sciences of			
		electrical and magnetic physics			
	3- Providing the student with theoretical and pra				
0 Taashin	skills related to the basics of electricity and magnet				
	g and Learning Strategie				
Strategy Teaching strategies in physics are a set of procedures, method techniques that are used with the aim of achieving pre-planned techniques.					
	_	ducational goals. Teaching strategies are			
		exibility and the ability to develop and modify			
	because they take into account all the factors that are expected to				

occur and that could influence their application. And also to fit all th real events associated with it

Principles of teaching strategies

- The strategy must be comprehensive and integrated, and cover all parts of the plan to be implemented without neglecting any part of i
- Determine all the goals to be achieved
- To be one of the means of support for the administrative planning function
- The strategy should be flexible and capable of development a modification, making it easy to implement

8. Course Objectives

Course Objectives

- 1- For the student to become familiar with the concept of astronomy and the planetarium.
- 2- Informing students about the solar system, studying the sun and the moon, and the galaxies and planets that the universe contains, as well as learning about the impact of the cosmic spheres on the nature of life on Earth.
- 3- For the student to learn about the physical properties of stars and study them.
- 9. Teaching and Learning Strategies
 - 1- Educational strategy, collaborative concept planning.
 - 2- Brainstorming education strategy
 - 3- Education Strategy Notes Series

Week	Hours	Required Learning Outcomes	Unit or subject name	Lear ning meth od	Evaluation method
1	2	Identify the general meaning of astronomy, the universe, and the astronomical instruments used by Arabs	History astronomy	Dialog discuss	Asking and answering questio from the student
2	2	Learn about Renaissance astronomy and the planetarium	Astronomy the Renaissance	II	

3	2	Knowledge of Kepler's three laws and their mathematical relationships	Kepler's law
4	2	Learn about Newton's laws and the law of universal gravitation	Newton's I and the lav universal gravitation
5	2	Learn about meridians, their characteristics and benefits	Longitude li
6	2	Learn about supply circles, their characteristics and benefits	latitude line
7	2	Identify the horizon and its types	the horizon
8	2	Identify the star constellations and the characteristic of each constellation	Stellar asteroids
9	2	Learn about the four astronomical seasons and how they occur And its times during the year	Astrological seasons
10	2	Learn about the concept of equinox, solstice, and earth's tottering	Astrologica seasons
11	2	Learn about the zodiac, the zodiac, and the names a locations of the signs	Zodiac
12	2	Identify astronomical units of measurement and the relationship between them	Astronomic units measureme
13	2	The first exam for the first course	
14	2	Learn about the solar system, the chemical composition of the sun, its layers, the sun's atmosphere, and the black wicks	Solar syster == ==

15	2	Identifying the moon, its phy phenomena of eclipse and so difference between them		the moon	==	==
Mid-y	/ear ex	ams				
16	2	Identifying the planets and t	he origin of the solar	the planets	==	==
17	2	Learn about the planets Mer characteristics of each plane	-		==	==
18	2	Identifying the planets Earth the two planets				
19	2	Learn about Jupiter, its interr	nal structure, and its		==	==
20	2	Learn about the planet Satur and its rings	n, its internal structure,		==	==
21	2	Learn about the planet Urani outer atmosphere, rings, and				
22	2	Learn about the planet Nept composition, atmosphere, m	une, its internal		==	==
23	2	Learn about the planet Plustructure				
24	2	Identify the minor planets	Asteroids	==		
25	2	Identify comets and their	Comets			
26	2	Identify meteors and meteorites and their characteristics		Meteors and meteors		
27	2	The first exam of the sec	cond semester			
28	2	Identify stars and their ph	ysical properties	The stars		
29	2	Identify the types of stars	and their life cycle	The stars		
30	2	Learn about the meaning Holy Quran	of black holes in the	The stars

8. Course Objectives

Course Objectives

- 3) Realizing the differences betw Newtonian and Einsteinian phys relativity and quantum physics.
- 4) Correct handling of physical phenomena according mod
- Students acquire skills dealing with modern atomic molecular physics.
- 2) Understanding mod concepts in this field of physics
- ern physics.....

9. Teaching and Learning Strategies

Strategy

- 1) Cooperative conceptual education planning strategy.
- 2) Brainstorming education strategy.
- 3) Educational notebook strategy.

8. Course Objectives

Course Objectives

- 1- Identifying pure and doped semiconductors, energy band theory, and material classification based on this theory.
- 2- Studying semiconductor diodes and their applications.
- 3- Studying bipolar junction transistors (BJT) and their applications, as well as field-effect transistors (FET) and their applications.
- 4- Identifying types of thyristors, classes of power amplifiers, positive and negative feedback, oscillators, and logic circuits.

9. Teaching and Learning Strategies

Strategy

- 1- **Teaching Strategy:** Cooperative concept mapping.
- 2- **Teaching Strategy:** In-person lectures and practical labs for 30 weeks, including monthly and daily exams.
- 3- **Teaching Strategy:** Sequential observation method.

1. Course Name: Nuclear Physics				
, and the second				
2. Course Code:				
3. Semester / Year:				
2024-2025				
4. Description Preparation Date:				
25/2/2025				
5. Available Attendance Forms:				
Attendance only				
6. Number of Credit Hours (Total) / Number of Units (Total)				
120 hours / year , 5 hours / weakly , 4 units/				
7. Course administrator's name (mention all, if more than one name)				
Name:				
Prof. Dr. Falih H. Al-Khudair	Email: falih.khudair@uobasrah.edu.iq			
Lecture Dr. Ashwaq F. Jaafer	Email: ashwaq.jaafer@uobasrah.edu.iq			

8. Course Objectives

The student learns about the nature of the nucleus and its components.

The student learned about the nuclear structure.

The student learns about the nature of reactions and nuclear binding energy.

Study of nuclear models

Study of nuclear decays and the nature of nuclear radiation

The student learns about the uses of nuclear physics.

9. Teaching and Learning Strategies

Strategy

Cooperative Concept Mapping Teaching Strategy Brainstorming Teaching Strategy:

Observations Chain Teaching Strategy:

Week					
			subject	_	method
			_	name	
1	3	Nuclear properties-Nucleus	Nuclear	Lecture,	Test, class participation
		components Measurement units for nuclear quantities	Properties	Properties discussion	
2-3	6	Nuclear banding energy, Mass defect	Nuclear	Lecture,	Homework and
_		(excess), Separation energy, Valley of stability,	structure	· ·	
4-5	6	Nuclear model, Liquid drop model,	Nuclear	Lecture,	Report Exam
		Shell model, Energy levels, Nuclea	structure	Discussion,	
		magnetic dipole moment, Electric quadrpole moment		Experimental	
6-7	6	Radioactive decay law, Activity,	Radioactivity	Lecture,	Report
		Mean life, Half-life, Production o		Discussion,	Experimental
		Radioactive isotopes,		Experimental	Exam
		Multiprocesses decay, Widths of decaying states, Dating			
		decaying states, batting			
8-9	6	Alpha(a) Decay, decay series,	Radioactivity	Lecture,	Report
		Energy and range of α-decay, beta		Discussion,	Experimental
		decay, Neutrino Hypothesis,		Experimental	Exam
		Classifications of \$\beta\text{-decays}			
10	3	Gamma decay, Energies of gamma	Radioactivity	Lecture,	Homework and
		decay, modes of gamma decay,		Power Point	discussion
	-	Internal conversion		Presentation	
11-	6	Types of Nuclear Reaction, Threshol		Lecture and	Test, class
12		Energy, Nuclear reactions cross sectio	Reaction	Discussion,	participation
13-	6	Theories of nuclear reactions,	Nuclear	Lecture and	Test, class
14		Nuclear Fission, Theory of nuclear	Reaction	Discussion,	participation
		fission, Types of nuclear fission,
