# Academic Program and Course Description Guide

2024-2023

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

## **Concepts and terminology:**

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

Course Description: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

Program Vision: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

Program Mission: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure:</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

#### 1. Program Vision

The College of Education for Pure Sciences strives to be one of the leading higher education institutions at the University of Basrah in the field of modern education and scientific research through its academic, research, and administrative activities. It also works to provide a comprehensive path for its students and faculty members, enabling them to be active and creative in serving society in the fields of physics education and its dynamic branches.

#### 2. Program Mission

Working on preparing and graduating outstanding scientific and leadership competencies in physics and its sciences and disciplines, as well as advancing knowledge in scientific research to serve the local, regional, and international communities. Additionally, the college focuses on training and refining students' minds scientifically and intellectually, emphasizing social and cultural values, and responding to the demands of the local job market.

# 3. Program Objectives

- 1. Embodying the vision, mission, and objectives of the University of Basrah by implementing best educational practices with a strong focus on quality assurance, performance enhancement, and continuous improvement.
- Preparing specialized cadres capable of serving the community and paving the way for future specializations.
- Promoting a culture of human diversity in society, transferring knowledge and linguistic skills, fostering academic research writing, and encouraging creative scientific achievements through student

  – and faculty–centered activities.

- 4. The college seeks to establish scientific and cultural cooperation agreements with peer colleges and departments in various institutions to achieve best practices in teaching and learning.
- 5. Emphasizing the educational and ethical aspects of all its members, fostering a spirit of dedication, tolerance, commitment, and service to the nation.
- Focusing on intellectual and cultural development by engaging with the experiences of other countries in the field of physics and its diverse applications.
- 7. Prioritizing the educational and ethical development of students, instilling a sense of dedication, tolerance, and responsibility.

# 8. Expected learning outcomes of the program

Knowledge

	<ol> <li>Enabling students to gain a deep understanding of physics.</li> <li>Preparing qualified teachers to teach physics in educational institutions.</li> <li>Training teaching staff with a high level of competence in physics.</li> <li>Preparing physics teachers capable of keeping up with scientific advancements in the field of physics.</li> </ol>						
Skills							
Ethica	1- Enabling students to grasp the fundamental concepts of physics. 2- Developing students' ability to analyze physical phenomena scientifically and practically. 3- Enhancing students' ability to clearly express their physics-related ideas and connect them to everyday life.						
Ethics							
	<ol> <li>1- Enhancing critical thinking skills and systematic analysis in applying physical principles.</li> <li>2- Encouraging students to explore physics-related topics and benefit from them.</li> <li>3- Developing students' abilities and instilling scientific values and principles through the study of physics.</li> </ol>						

# 9. Teaching and Learning Strategies

- Explaining the material during the lecture.
- Clarifying concepts on the board.
- Encouraging cooperative learning through questions and discussions.
- Presenting images and explanatory videos on the screen..

#### 10. Evaluation methods

- Weekly, monthly, and daily exams, as well as the final year exam.
- Homework assignments and oral questions.

#### **Professional Development**

#### Mentoring new faculty members

- 1- Engaging with experienced university professors, utilizing modern teaching technologies, and structuring scientific lectures.
- 2- Continuously improving teaching methods and encouraging reading in public libraries.
- 3- Attending specialized developmental courses in this field.

#### Professional development of faculty members

Briefly describe the academic and professional development plan and arrangements for faculty such as teaching and learning strategies, assessment of learning outcomes, professional development, etc.

#### 12. Acceptance Criterion

(Setting regulations related to enrollment in the college or institute, whether central admission or others)

#### 13. The most important sources of information about the program

- 1– Sources approved by the university and counterpart colleges (Sectorial Committee).
- 2- External sources and various books from the internet or private and public libraries.

#### 14. Program Development Plan

This academic program aims to enhance the level of faculty members, strengthen their competencies, and prepare graduates with the skills and qualifications that enable them to compete in the job market, whether in education and pedagogy or other sectors within society. Accordingly, the program seeks to achieve the following objectives:

- 1. Providing society with highly qualified teachers.
- 2. Keeping up with the latest scientific and specialized developments to ensure quality education.
- 3. Strengthening collaboration with the community to meet educational and professional needs.
- 4. Directing the educational process toward achieving community development.
- 5. Instilling ethical and professional principles in the field of teaching.

#### 8. Course Objectives

# Course Objectives

Learn the importance of English grammar, learn the four skills, translate scientific terms, how to learn English pronunciation as well to understand the basic structure of the word English.

#### 9. Teaching and Learning Strategies

#### Strategy

Exploring English grammar to understand how grammar important in the process of writing and speaking. in T translation of scientific terms to understand it and to use it other scientific subjects.

Week	Hours	Required	Unit or subject name	Learning	Evaluat

Name: Dr. Abadhar Rahman Ahmed, Email: abadhar.ahmed@uobasrah.edu.iq

#### 8. Course Objectives

- 1. Learn about the basic concepts of calculus
- 2. Identify the connection of functions and their relationship to limits
- 3. Identify the ability to differentiate functions, the integration of various functions, and its relationship to continuity
- 4. Knowledge of applications of calculus in various sciences
- 5. The ability to use calculus to solve mathematical equations

#### 9. Teaching and Learning Strategies

(1) Regular lectures (2) Presentations (3) Electronic screen (4) Exercises and activities the classroom (5) Directing students to some sources that contain examples and exercises benefit from

Year 2023/2024
4. Description Preparation Date:
12/3/2024
5. Available Attendance Forms:
Available only
6. Number of Credit Hours (Total) / Number of Units (Total)
90 h yearly , 3h weekly
7. Course administrator's name (mention all, if more than one name)
Name: 1-riydh ch
2-Hussein F
Email:

- 1- riydh.abalhiel@uobasrah.edu.iq
- 2- Husseinfalaih@ uobasrah.edu.iq

### 8. Course Objectives

#### **Course Objectives**

- 1-Teaching the student the basic theoretical concepts in electricity and magnetism
- 2-Teaching the student the ideas and sciences electrical and magnetic physics
- 3- Providing the student with theoretical appractical skills related to the basics of electricand magnetism

### 9. Teaching and Learning Strategies

#### Strategy

Teaching strategies in physics are a set of procedures, methods and techniques that are used with the aim of achieving pre-planned pedagogical and educational goals. Teaching strategies are characterize by flexibility and the ability to develop and modify because they take in account all the factors that are expected to occur and that could influentheir application. And also to fit all the real events associated with it Principles of teaching strategies

- The strategy must be comprehensive and integrated, and cover all par of the plan to be implemented without neglecting any part of it.
- Determine all the goals to be achieved
- To be one of the means of support for the administrative planning function
- The strategy should be flexible and capable of development modification, making it easy to implement

# **Course Description Form**

1. Course Name:
Atomic and molecular physics
2. Course Code:
3. Semester / Year:
2023-2024
4. Description Preparation Date:
:2024/2/25
5. Available Attendance Forms:
My presence only

# 6. Number of Credit Hours (Total) / Number of Units (Total)

90 hours annually. 3 hours a week theoretically.

# 7. Course administrator's name (mention all, if more than one name)

Name: Proff.Dr.Thaer Munshad Salman Email: thaer.salman@ uobasrah.edu.iq

Name: Dr. Abdullaha Abdalameer

Email: abdullaha.hussain68@ uobasrah.edu.iq

# 8. Course Objectives

#### **Course Objectives**

- 3) Realizing the differences between Newtonian and Einsteinian physics.
- 4) Correct handling of physical phenomena accord to mod
- Students acquire skills dealing with modern atomic molecular physics.
- 2) Understanding mod concepts in this field physics.....
- ern physics.....

• .....

# 9. Teaching and Learning Strategies

#### Strategy

- 1) Cooperative conceptual education planning strategy.
- 2) Brainstorming education strategy.
- 3) Educational notebook strategy.

Week	Hours	Required Learning Outcomes	Unit o	or subject name	Learn ing meth od	Eva luat ion met

### 8. Course Objectives

### Course Objectives

- 1- Identifying pure and doped semiconductors, energy band theory, and material classification based on this theory.
- 2- Studying semiconductor diodes and their applications.
- 3- Studying bipolar junction transistors (BJT) and their applications, as well as field-effect transistors (FET) and their applications.
- 4- Identifying types of thyristors, classes of power amplifiers, positive and negative feedback, oscillators, and logic circuits.

# 9. Teaching and Learning Strategies

#### Strategy

- 1- **Teaching Strategy:** Cooperative concept mapping.
- 2- **Teaching Strategy:** In-person lectures and practical labs for 30 weeks, including monthly and daily exams.
- 3- **Teaching Strategy:** Sequential observation method.

Week	Hours	Required Learning	Unit or subject name	Learning	Evaluati	n

### 8. Course Objectives

- 1- Providing students with good teaching skills.
- 2- Developing students' abilities to understand, comprehend, and assimilate the criteria upon which they choose a topic or choose methods for collecting data and information, and choose methods for analyzing this data and information in order to reach the goal.
- 3 Helping students adapt and face the changes that occur in different areas of life because it is linked to the reality that the student lives and its requirements.

### 9. Teaching and Learning Strategies

#### Strategy

- 1- Educational strategy, collaborative concept planning.
- 2- Brainstorming education strategy.
- 3- Education Strategy Notes Series.
- 4- Teaching strategy feedback at the present time.

Week	Hours	Required Learning Unit or subject		Learning	Evaluation

4. Description Preparation Date:

25/2/2024

5. Available Attendance Forms:

Attendance only

6. Number of Credit Hours (Total) / Number of Units (Total)

120 hours / year , 5 hours / weakly , 4 units/

# 7. Course administrator's name (mention all, if more than one name)

Name:

Prof. Dr. Falih H. Al-Khudair Email: <a href="mailto:falih.khudair@uobasrah.edu.iq">falih.khudair@uobasrah.edu.iq</a>
Lecture Dr. Ashwaq F. Jaafer Email: <a href="mailto:ashwaq.jaafer@uobasrah.edu.iq">ashwaq.jaafer@uobasrah.edu.iq</a>

# 8. Course Objectives

The student learns about the nature of the nucleus and its components.

The student learned about the nuclear structure.

The student learns about the nature of reactions and nuclear binding energy.

Study of nuclear models

Study of nuclear decays and the nature of nuclear radiation

The student learns about the uses of nuclear physics.

#### 9. Teaching and Learning Strategies
